Abstract

We provide topological interpretations of the recently introduced notions of amenability and congeniality of bases of infinite dimensional algebras. In order not to restrict our attention only to the countable dimension case, the uniformity of the topologies involved is analyzed and therefore the pertinent ideas about uniform topological spaces are surveyed.

A basis B over an infinite dimensional F-algebra A is called amenable if F^B, the direct product indexed by B of copies of the field F, can be made into an A-module in a natural way. (Mutual) congeniality is a relation that serves to identify cases when different amenable bases yield isomorphic A-modules.

(Not necessarily mutual) congeniality between amenable bases yields an epimorphism of the modules they induce. We prove that this epimorphism is one-to-one only if the congeniality is mutual, thus establishing a precise distinction between the two notions.

1. Introduction and Preliminaries

The notions of amenability and congeniality for bases of an infinite dimensional algebra were recently introduced in [1]. Since then, several papers have

continuous bounded cohomology cannot be interpreted as a derived functor and that triangulated methods break down The author proves that this is wrong He uses the formalism of exact categories and their derived categories in order to construct a classical derived functor on the category of Banach G modules with values in Waelbroeck s abelian category This gives us an axiomatic characterization of this theory for free and it is a simple matter to reconstruct the classical semi normed cohomology spaces out of Waelbroeck s category The author proves that the derived categories of right bounded and of left bounded complexes of Banach G modules are equivalent to the derived category of two abelian categories one for each boundedness condition a consequence of the theory of abstract truncation and hearts of t structures Moreover he proves that the derived categories of Banach G modules can be constructed as the homotopy categories of model structures on the categories of chain complexes of Banach G modules thus proving that the theory fits into yet another standard framework of homological and homotopical algebra **Mathematical Reviews** ,2005 **Banach Algebras and Their Applications** Anthony To-Ming Lau,Volker Runde,2004 This proceedings volume is from the international conference on Banach Algebras and Their Applications held at the University of Alberta Edmonton It contains a collection of refereed research papers and high level expository articles that offer a panorama of Banach algebra theory and its manifold applications Topics in the book range from theory to abstract harmonic analysis to operator theory It is suitable for graduate students and researchers interested in Banach algebras **Linear and Complex Analysis Problem Book 3** ,1994 Handbook of Algebra M.
