Emerson, 2001 **Entering the Field in Qualitative Field Research** Hameed Chughtai, Michael David Myers, 2021 The concept of the field is significant in ethnographic research as well as qualitative research methods more generally However how a field researcher enters the field is usually taken for

granted after gaining access to the field We suggest that entrance is a distinct phase of fieldwork that differs from negotiating access Entrance is not a trivial event rather it is a rite of passage into a complex practice world and marks a critical field moment Drawing on our ethnography and insights from hermeneutics and anthropology we show that a practical understanding of the field represents a fusion of horizons where a fieldworker is thrown The concept of thrownness highlights the fact that the fieldworkers own historicity and prejudices affect their entrance into the field hence entrance into the field orientates an ethnographer in the field and influences the entire period of fieldwork that follows Our theorizing is intended as a contribution towards advancing the discussion of qualitative research methods Full paper available at <https://doi.org/10.1111/isj.12124>

Making Sense of Field Research Sheila Pontis, 2018-07-17. Learn how to use field research to bring essential, people-centred insights to your information design projects. Information design is recognized as the practice of making complex data and information understandable for a particular audience, but what's often overlooked is the importance of understanding the audience themselves during the information design process. Rather than rely on intuition or assumptions, information designers need evidence gathered from real people about how they think, feel, and behave in order to inform the design of effective solutions. To do this, they need field research. If you're unsure about field research and how it might fit into a project, this book is for you. This text presents practical, easy-to-follow instructions for planning, designing, and conducting a field study, as well as guidance for making sense of field data and translating findings into action. The selection of established methods and techniques drawn from social sciences, anthropology, and participatory design is geared specifically toward information design problems. Over 80 illustrations and five real-world case studies bring key principles and methods of field research to life. Whether you are designing a family of icons or a large-scale signage system, an instruction manual, or an interactive data visualization, this book will guide you through the necessary steps to ensure you are meeting people's needs.
