Biodeterioration of Stone Surfaces Larry St.Clair, Mark Seaward, 2012-11-02 This is a timely volume in view of the considerable interest currently shown in the preservation of our cultural heritage and the extensive and growing literature on the subject Unfortunately the latter is to be found in a wide variety of published sources some aimed at a very specific readership and therefore not all that accessible to those who need this resource The present volume draws together a spectrum of biodeterioration work from across the world to provide an overview of the materials examined and the methodologies employed to elucidate the nature of the problems as well as an extensive and current bibliographical resource on lichen biodeterioration Biodeterioration of historical and culturally important stone substrata is a complex problem to be addressed Easy risk free solutions are simply not available to be dealt with by other than a wide range of expertise Successful resolution of this issue will inevitably require a multidisciplinary effort where biologists work in close cooperation with ecologists geologists geochemists crystallographers cultural property conservators archaeologists anthropologists and historians in order to recommend the most effective management scheme The advantage of this approach is obvious multidisciplinary management teams with good leadership can ask more appropriate questions while developing much more thoughtful and informed decisions

Arch Bridges A. Sinopoli, 2020-12-17 Modern structural engineering surprises us with the mastery and certainty with which it plans and carries out daring projects such as the most recent metal or concrete bridges whether they be suspension or arch bridges On the other hand little is yet known about the state of knowledge of construction science and techniques which well before the arrival of modern methods based on the mechanics of deformable continua made it possible in the past to erect the vaulted masonry structures that we have inherited The fact that these have lasted through many centuries to our time and are still in a fairly good state of conservation makes them competitive as far as stability and durability are concerned with those constructed in other materials Although it is known that the equilibrium of the arch is guaranteed by any funicular whatsoever of the loads contained inside the profile of an arch finding the unique solution is not such a certainty In other words the problem of the equilibrium of vaulted structures is Poleni's problem the one for which the Venetian scientist was able to give an exemplary solution on the occasion of the assessment of the dome of St Peter's Arch Bridges focuses on the main aspects of the debate about the masonry arch bridge History of structural mechanics and construction theoretical models analysis for assessment numerical methods experimental and non destructive testing maintenance and repair are the topics of the Conference The breadth and variety of the contributions presented and discussed by leading experts from many countries make this volume an authoritative source of up to date information
