view to identifying explanations as to how recipes has seldom worked as intended One out of several reasons rests on the fact that recipes do not take the so called X factor into account With the X factor as the starting point the book examines a sample of 50 global companies of which some has achieved a remarkable high Return on Strategy and others failed The 50 companies covers most continents as some are from the North America some are from the European continent and others are from different parts of the emerging Asian region threatening companies from the Western hemisphere The book explains the reason behind success and failures and provides practical tools as to how companies may increase their Return on Strategy In the toolbox you will find a framework on how to increase the Return on Strategy as well a number of dynamic positioning tools road maps and bearing points Invariably more and more companies including consultants business leaders and MBAs now work diligently in order to increase their Return on Strategy and the best of them are here to stay successfully are you

Bookseller and the Stationery Trades' Journal, 1909 **VC Index Performance. Performance of Publicly Traded Venture Capital Indices** Noah Paul, 2023-10-17 Master's Thesis from the year 2021 in the subject Business economics Investment and Finance grade 8 1 10 TiasNimbis Business School course Investment Management language English abstract The purpose of this study is to examine the performance of publicly traded Venture capital indices As these indices have become available to the public in 2012 allowing investors globally to gain exposure to the Venture Capital asset class It is of note that the indices were conceived in 1996 but only became available to the public in 2012 This raises the question if these Index funds are able to provide attractive returns or even beat the market In order to answer this question archival price datasets have been extracted for VC indices various benchmark indices and analyzed using the Sharpe ratio

and Jensen's alpha. The data extracted covers a 25-year time frame from 1995-2021 and is extracted in both monthly and annual time intervals. Using this approach, the research finds that one of the VC indices exceeds market risk-adjusted returns in terms of the Sharpe ratio and Jensen's alpha in net and gross returns. This finding contradicts the academic theory and should not be possible. The other VC index shows significant underperformance using both measures. To conclude, it is not possible to make any general statements using the present sample. In regard to VC index performance, therefore, it is suggested that further empirical research is conducted using a larger sample of VC indices while the outperformance of the TRVCINX is also investigated as it stands in contrast to the academic literature.

A Wall Street cartel has quietly seized control of the American economy, and they are forcing governments and businesses to bow down to their political agenda using your money to do it. Three Wall Street firms have quietly amassed more money than Jeff Bezos, Elon Musk, Andrew Carnegie, and John Rockefeller combined. But the money isn't even theirs. These asset managers have accumulated all their power through passive funds, as most investors no longer believe anyone can reliably pick stocks. Yet the Big Three have decided that they can reliably pick the right social policies instead. As entrepreneur Vivek Ramaswamy reveals, the results are
