for Robot Intelligence and Autonomy* Daniele Pucci,Vadim Tikhanoff,Ugo Pattacini,Maxime Petit,Lorenzo Jamone,2020-02-25
Intelligence and autonomy are among the most extraordinary capacities blossomed by human evolution Yet endowing
humanoid robots with these two crucial capabilities is still one of the biggest problems for the robotics community despite
decades of research On the software side algorithms for artificial intelligence are still at an embryonic stage On the hardware
side robotic actuators are a far cry from the muscular human system in terms of flexibility and adaptability which in turn
reduces autonomy and robustness Underneath the nature of algorithms for intelligence and technology for autonomy the
importance of efficient scalable implementations of robust software goes without saying Among the large variety of humanoid
robots the iCub has emerged as one of the most diffused research platforms It has been developed as part of the RobotCub
EU project and subsequently adopted by more than 35 laboratories worldwide Collaborations across laboratories are
encouraged by writing code and libraries openly available As a consequence iCub is considered to be the ideal platform for
experimenting and advancing open source software for research in several domains ranging from motor control to cognitive
