Redundancy at information and data level Niklas Haug, 2024-08-02 Research Paper undergraduate from the year 2024 in the subject Computer Science General grade 1 0 language English abstract Almost any system used in daily life relies on transmitting data Whether it s sending a message to a friend transferring money to a bank account or streaming a movie on Netflix data is being transmitted from one point to another However data transmission is not always error free Errors from both humans and machines are quite common and can occur due to various reasons including Transposed digits e g when typing an IBAN or an amount of money into a banking app Noise in the communication channel Interference in wireless communications Hardware malfunctions or software bugs Although we cannot eliminate the occurrence of errors true to the motto Shit happens we can implement measures to detect these errors and ideally correct them without having to retransmit

the corrupted data a process known as Forward Error Correction FEC These measures range from simple methods such as checksums implemented in numbers used every day e.g. IBAN ISBN EAN to complex algorithms like Reed Solomon codes used in communication systems and storage devices For instance the ability to correct errors allows data on a CD which may be partly corrupted due to physical scratches to be reconstructed and ensures that QR codes remain scannable and decodable even when partially soiled or illegible

Robin Hood Math Noah Giansiracusa, 2025-08-05 How the rich and powerful use math to exploit you and what you can do to beat them at their own game Everything we do today is recorded as data that's sold to the highest bidder Plugging our personal data into impersonal algorithms has made government agencies more efficient and tech companies more profitable But all this comes at a price It's easy to feel like an insignificant number in a world of number crunchers who care more about their bottom line than your humanity It's time to flip the equation turning math into an empowering tool for the rest of us Award winning mathematician Noah Giansiracusa explains how the tech giants and financial institutions use formulas to get ahead and how anyone can use these same formulas in their everyday life You'll learn how to handle risk rationally make better investments take control of your social media and reclaim agency over the decisions you make each day In a society that all too often takes from the poor and gives to the rich math can be a vital democratizing force Robin Hood Math helps you to think for yourself act in your own best interests and thrive
