Field Virology 5th Edition:

Viruses and Human Disease Ellen G. Strauss, James H. Strauss, 2007-09-21 Completely revised and updated the new edition of this groundbreaking text integrates basic virology with pathophysiological conditions to examine the connection between virology and human disease Most virology textbooks focus on the molecular biology involved without adequate reference to physiology This text focuses on viruses that infect humans domestic animals and vertebrates and is based on extensive course notes from James Strauss virology class at the California Institute of Technology taught for over 30 years Expertly depicting in color the molecular structure and replication of each virus it provides an excellent overview for students and professionals interested in viruses as agents of human disease Includes over 30% new material virtually all of the figures and tables have been redrawn to include the latest information and the text has been extensively rewritten to include the most up to date information Includes a new chapter on emerging and reemerging viral diseases such as avian flu SARS the spread of West Nile virus across America and the continuing spread of Nipah virus in Southeast Asia Further reading sections at the end of each chapter make it easy find key references World maps depicting the current distribution of existing and newly emerging viruses are also incorporated into the text *Color Atlas of Herpetic Eye Disease* Rainer Sundmacher, 2008-11-14 This well structured atlas offers practical advice for the recognition and management of each Herpetic Eye problem It is based on nearly four decades of practical and scientific work and experience with follow ups in thousands of herpes patients

Bats and Viruses Lin-Fa Wang, Christopher Cowled, 2015-09-08 Approximately 75% of emerging infectious diseases are zoonoses and the rate of emergence of zoonotic diseases is on the rise Bats are being increasingly recognised as an important reservoir of zoonotic viruses of different families including SARS coronavirus Nipah virus Hendra virus and Ebola virus Understanding bats role in emerging zoonotic diseases is crucial to this rapidly expanding area of research *Bats and Viruses A New Frontier of Emerging Infectious Diseases* provides an updated overview of research focusing on bat biology and the role bats play as hosts of many major zoonotic viruses The text covers bat biology immunology and genomics Chapters also delve into the various major bat borne virus families including lyssaviruses paramyxoviruses coronaviruses filoviruses and reoviruses among others Edited by leaders in the field *Bats and Viruses A New Frontier of Emerging Infectious Diseases* is a timely invaluable reference for bat researchers studying microbiology virology and immunology as well as infectious disease workers and epidemiologists among others

Papillomavirus Type 16 E7 in Human Papillomavirus-associated Carcinogenesis ,2012 Persistent infections by high risk Human Papillomavirus HPV types are associated with nearly all cervical cancer a large majority of other anogenital cancers and a growing subset of head and neck cancers Of these high risk HPVs HPV type 16 HPV 16 is the genotype most commonly associated with these cancers HPV 16 encodes three oncogene E5 E6 and E7 that are largely responsible for HPV associated malignancies In HPV transgenic mice HPV 16 E7 functions as the predominant oncogene in the context of cervical as well as head neck cancers However the molecular mechanisms by which E7 causes cancers in these organs has remained undefined HPV 16 E7 protein can interact with over 100 cellular proteins Among these cellular factors it is best known for its ability to bind to the tumor suppressor pRb and its related pocket proteins p107 and p130 Prior studies using genetically engineered mice demonstrated that inactivation of pRb alone is not sufficient to recapitulate the oncogenic properties of E7 in both cervical and head neck carcinogenesis Based on these findings the focus of my thesis was to identify other cellular factors that are important targets of E7 in causing cancers of the cervix and head neck region To perform my studies I made use of mouse models for HPV associated cervical and head neck cancers previously established in the Lambert laboratory In the context of head neck cancer studies I learned that combinatorial loss of pRb and p107 led to high susceptibility to head and neck cancer and are therefore highly relevant E7 targets In cervical cancer studies I made two important observations First p21Cip1 functions as a tumor suppressor in cervical carcinogenesis and its inactivation by HPV 16 E7 partially contributes to E7 s oncogenic properties in the cervix Secondly in contrast to what I observed in the head neck region combinatorial loss of two or even all three pocket proteins was not sufficient to induce cervical cancer though it did lead to the development of high grade dysplasia in the female reproductive tract These findings provide evidence for a role of targets other than the pocket proteins and the p21 in mediating E7 s oncogenic properties in cervical cancer **Case Files**
