**Bistatic SAR Data Processing Algorithms** Xiaolan Qiu,Chibiao Ding,Donghui Hu,2013-04-05 BISTATIC SAR DATA PROCESSING ALGORITHMS Synthetic Aperture Radar SAR is critical for remote sensing It works day and night in good weather or bad Bistatic SAR is a new kind of SAR system where the transmitter and receiver are placed on two separate platforms Bistatic SAR is one of the most important trends in SAR development as the technology renders SAR more flexible and safer when used in military environments Imaging is one of the most difficult and important aspects of bistatic SAR data processing Although traditional SAR signal processing is fully developed bistatic SAR has a more complex system structure so signal processing is more challenging Focusing on imaging aspects of bistatic SAR signal processing this book covers resolution analysis echo generation methods imaging algorithms imaging parameter estimation and motion compensation methods Gives a general and updated framework for image formation using signal processing aspects Starts with an introduction to traditional SAR before moving on to more advanced topics Offers readers a range of exhaustive tools to process signals and form images Provides a solid reference for the imaging of other complicated SAR MATLAB codes are available from the book s companion

site The book is ideal for researchers and engineers in SAR signal and data processing as well as those working in bistatic and multistatic radar imaging and in the radar sciences Graduate students with a background in radar who are interested in bistatic and multistatic radar will find this book a helpful reference

**SAR Polar Format Implementation with MATLAB.** Armin Walter Doerry, Grant D. Martin, 2005 Traditional polar format image formation for Synthetic Aperture Radar SAR requires a large amount of processing power and memory in order to accomplish in real time These requirements can thus eliminate the possible usage of interpreted language environments such as MATLAB However with trapezoidal aperture phase history collection and changes to the traditional polar format algorithm certain optimizations make MATLAB a possible tool for image formation Thus this document s purpose is two fold The first outlines a change to the existing Polar Format MATLAB implementation utilizing the Chirp Z Transform that improves performance and memory usage achieving near realtime results for smaller apertures The second is the addition of two new possible image formation options that perform a more traditional interpolation style image formation These options allow the continued exploration of possible interpolation methods for image formation and some preliminary results comparing image quality are given
