Food Canning Technology:

Fundamentals of Food Canning Technology John Mathews Jackson, Byron M. Shinn, 1979 Developments of the canning industry heat sterilization of canned food rigid metal containers Glass containers and closures flexible packaging for thermoprocessed foods General canning procedures vegetables Specialty products canned meats and poultry Canning of marine products Harzad analysis and quality assurance waste disposal and water usage Factor affcting nutrient content of canned foods

Food Canning Technology Jean Larousse, Bruce E. Brown, 1997 This reviw of the various scientific technological and economical aspects of food product preservation examines the problems associated with the stability of products such as meat fish vegetables and fruit The methods and processing steps involved are also covered

Canning Technology Emmanuel Ohene Afoakwa, 2008 Canned foods are a significant component of the diet of most people in both developed and developing countries offering a wider choice of nutritious good quality foods in a convenient form all year During canning both desirable and undesirable changes occur in nutritional and sensory properties of foods resulting from heat treatment employed for the destruction of microorganisms to achieve the desired commercial sterility The extent of thermal processing in terms of both temperature and duration of the treatment is dependent upon the chemical and physical composition of the product the canning medium and the conditions of storage determining the product quality in terms of its sensory properties and nutrient content This book reviews the major principles and operations used during food canning identifies the nutritional and sensory changes occurring during the process and their effect on the quality of canned foods In addition it explains the use of response surface methodology RSM as modelling and optimisation techniques used in the canning industry in recent times to manipulate canning processes to maintain the nutritional and sensory qualities of canned foods using two recent studies where RSM was used to study the effect of pre canning processes including blanching time soaking time and sodium hexametaphosphate $\text{NaPO}_3\text{6}$ salt concentration on moisture minerals leached solids phytates tannins and hardness texture of cowpeas *Vigna unguiculata* and bambara groundnut *Voandzei subterranea* Regression models were developed to predict the pre canning parameters that yield the best quality products with minimal effects on the nutritional and textural properties of the products The optimal conditions found to achieve the optimum quality of the canned cowpeas were blanching time of 5 min soaking time of 12 h and $\text{NaPO}_3\text{6}$ salt concentration of 0.5% and for the bambara groundnut blanching time of 8 min soaking time of 12 h and $\text{NaPO}_3\text{6}$ salt concentration of 0.5% The combination of blanching soaking and $\text{NaPO}_3\text{6}$ salt were modelled using RSM to retain the nutritional mineral content of products while reducing the anti nutritional factors and the hardness of the canned products with acceptable quality characteristics indicating that as recent advances in canning technology modelling techniques could be used to control canning operations while retaining desirable product quality characteristics

See The way we use technology reflects the way we live our lives Much of the technology we depend on is invisible to us and
this has costs for society in general and for technology workers in particular This book will tell stories from the history of
canned food to illustrate the nature of technology work and how it forms our lives Chapter 2 The Invention of Canned Food
Paris at the turn of the nineteenth century An entrepreneurial chef perfects a process for preserving food by sealing it in a
glass jar with a cork then cooking thoroughly He struggles in business but writes a book so his methods can be copied
Invention as an evolutionary process Inventions are only important if they are copied Chapter 3 The Invention of the Tin Can
The tangled path from Paris to London in the early 19th century Appert's invention is copied and improved Metal cans
become commercially important in the niche market of naval expeditions Microinventions and macroinventions sub
technologies and innovations The phylogenetic tree of canning Chapter 4 The Industrialization of Tin Cans Largely America
from 1824 to WWI The processes of making and cooking metal cans are modified to replace skilled labor with integrated
systems of machines Industrialization The evolution of technology by a hierarchy of microinventions that encompasses even
the smallest technical modification Chapter 5 Canning Salmon from the Pacific The Pacific Northwest 1862 1905 Managing
labor and technology for a canning season that lasts only a few weeks The replacement of labor by technology is not an

inevitable law but depends on local circumstances and individual choices Race labor and technology Chapter 6 Canning Soup in New Jersey Camden New Jersey 1862 1935 The development of the Campbell s soup company under the leadership of Jack Dorrance Managing technology and labor for both large scale production of complex recipes as well as the annual tomato glut Labor unions and management gurus Cannery workers must work with their consumers to make brands people will choose to buy Chapter 7 The Early Science of Canning Europe from about 1665 to 1870 The scientific ideas that will explain canning develop largely independently from the technology of food preservation An incorrect chemical explanation of why canning works is eventually superseded by a better microbiological explanation but without making any difference to the practice How science changes its mind Chapter 8 The Birth of a Science of Canning Wisconsin and Massachusetts 1894 1902 A growing canning industry meets a new generation of academic scientists trained in microbiology and motivated to help The scientists quickly translate their experience from other contexts and provide useful results which are disseminated by trade across the industry The social and political frameworks needed for collaboration Chapter 9 Botulism The Applied Science of Canning America from 1919 to the mid 1920s Well publicized cases of botulism from canned foods threaten the entire industry Scientists from the National Cannery Association collaborate with State and Federal governments and with university researchers in an organized research program to solve the problem Science is used collaboratively by industry and government to guide regulation Chapter 10 BPA Conflicting Communities of Scientists America at the turn of the 21st century A community of environmental scientists identifies a novel risk from a component of can linings and campaigns to get it banned The limits of what we can know about risk How the social networks of scientists shape their values and conclusions Science and politics Chapter 11 The Continuing Invention of Canned Food What we can gain by recognizing the technologies that support us Virtues of technology workers

Modern Technology on Food Preservation (2nd Edition) NPCB
Board, 2012-06-02 Food Preservation has become an integral part of the food processing industry There are various methods of food preservation drying canning freezing food processing etc Food processing is one the method of food preservation which is the set of methods and techniques used to transform raw ingredients into food or to transform food into other forms for consumption by humans or animals either in the home or by the food processing industry Canning is one of the various methods of food preservation in which the food is processed and then sealed in an airtight container This process prevents microorganisms from entering and proliferating inside Dehydration is the process of removing water or moisture from a food product Food dehydration is safe because water is removed from the food Freezing is also one of the most commonly used processes commercially and domestically for preserving a very wide range of food including prepared food stuffs which would not have required freezing in their unprepared state Benefits of food processing include toxin removal preservation easing marketing and distribution tasks and increasing food consistency In addition it increases seasonal availability of many foods enables transportation of delicate perishable foods across long distances and makes many kinds of foods safe to eat by

deactivating spoilage and pathogenic micro organisms Nanotechnology exhibits great potential for the food industry New methods for processing nanostructures are being developed having novel properties that were not previously possible As such due to the recent up gradation of preservation techniques the preservation industry is also growing almost at the same rate as the food industry which is about 10 to 12% per year The purpose of this book is to present the elements of the technology of food preservation It deals with the products prepared from various fruits and vegetables commercially Relevant information on enzymes colours additives flavours adulteration etc has been given This book also contains photographs of equipments and machineries used in food preservation This book will be very useful for new entrepreneurs food technologists industrialists libraries etc Encyclopedia of Food Science and Technology Yiu H.
