Dynamical Ionosphere Massimo Materassi, Biagio Forte, Anthea J. Coster, Susan Skone, 2019-11-28 The Dynamical Ionosphere A Systems Approach to Ionospheric Irregularity examines the Earth's ionosphere as a dynamical system with signatures of complexity. The system is robust in its overall configuration with smooth space-time patterns of daily, seasonal, and Solar Cycle variability but shows a hierarchy of interactions among its sub-systems yielding apparent unpredictability, space-time irregularity, and turbulence. This interplay leads to the need for constructing realistic models of the average ionosphere incorporating the increasing knowledge and predictability of high variability components and for addressing the difficulty of dealing with the worst cases of ionospheric disturbances, all of which are addressed in this interdisciplinary book. Borrowing tools and techniques from classical and stochastic dynamics, information theory, signal processing, fluid dynamics, and turbulence science, *The Dynamical Ionosphere* presents the state of the art in dealing with irregularity, forecasting ionospheric threats, and theoretical interpretation of various ionospheric configurations. Presents studies addressing Earth's ionosphere as a complex dynamical system including irregularities and radio scintillation, ionospheric turbulence, nonlinear time series analysis, space-ionosphere connection, and space-time structures. Utilizes interdisciplinary tools and techniques such as those associated with stochastic dynamics, information theory, signal processing, fluid dynamics, and turbulence science. Offers new data-driven models for different ionospheric variability phenomena. Provides a synoptic view of the state of the art and most updated theoretical interpretation, results, and data analysis tools of the worst case behavior in ionospheric configurations. *Media Production, Delivery and Interaction for Platform Independent Systems* Oliver Schreer, Jean-François Macq, Omar Aziz Niamut, Javier Ruiz-Hidalgo, Ben Shirley, Georg Thallinger, Graham Thomas, 2013-12-06 Presents current trends and potential future developments by leading researchers in immersive media production, delivery, rendering, and interaction. The underlying audio and video processing technology that is discussed in the book relates to areas such as 3D object extraction, audio event detection, 3D sound rendering, and face detection, gesture analysis, and tracking using video and depth information. The book will give an insight into current trends and developments of future media production, delivery, and reproduction. Consideration of the complete production, processing, and distribution chain will allow for a full picture to be presented to the reader. Production developments covered will include integrated workflows developed by researchers and industry practitioners, as well as capture of ultra-high resolution panoramic video and 3D object-based audio across a range of programme genres. Distribution developments will include script-based, format-agnostic network delivery to a full range of devices, from large-scale public panoramic displays with wavefield synthesis and ambisonic audio reproduction to small-screen mobile devices. Key developments at the consumer end of the chain apply to both passive and interactive viewing modes and will incorporate user interfaces such as gesture recognition and second-screen devices to allow manipulation of the audio-visual content. Presents current trends and potential future developments by leading researchers in immersive media production, delivery, rendering, and interaction. Considers the complete production

processing and distribution chain illustrating the dependencies and the relationship between different components Proposes that a format agnostic approach to the production and delivery of broadcast programmes will overcome the problems faced with the steadily growing number of production and delivery formats Explains the fundamentals of media production in addition to the complete production chain beyond current state of the art through to presenting novel approaches and technologies for future media production Focuses on the technologies that will allow for the realization of an E2E media platform that supports flexible content representations and interactivity for users An essential read for Researchers and developers of audio visual technology in industry and academia such as engineers in broadcast technology companies and students working toward a career in the rapidly changing area of broadcast both from a production and an engineering perspective
