Part 3 analyses the international dimension of energy governance, both regional and global, and climate action. It further provides an analysis of the challenges faced by small island developing states, least developed countries, and other vulnerable places. It also offers an analysis of the prospects for a European Energy Union and explores why energy security and decarbonization are significant. Building a Sustainable Energy Future Steven C. Beering, 2011 This is a print on demand edition of a hard-to-find publication. The US faces a critical challenge to transform our current fossil fuel-based energy economy to a sustainable energy economy. This transformation must be achieved to increase US energy independence, enhance environmental stewardship, and reduce energy and carbon intensity, and generate continued economic growth. These are the six topics in this report: 1. A comprehensive Fed strategy; 2. Private and Fed support for sustainable energy R&D is inadequate; 3. The US energy economy does not value the environment as a public good; 4. Human capital development in the sustainable energy sector is vital; 5. Limited international engagement inhibits progress; 6. Public support for sustainable energy is needed to get to a sustainable energy economy.

Publications,2016 This report aimed at policy makers from Asia and the Pacific provides a historical perspective on regional energy connectivity and its implementation challenges as well as outlining an action plan for accelerated regional energy integration to bring shared benefits to ESCAP's member States The report concludes that energy connectivity can increase the supply and reduce the cost of energy while lowering its social and environmental costs and addressing the challenges of energy security Regional cooperation in energy has been evolving mainly through five subregional clusters South East Asia Central Asia South Asia North East Asia and the Pacific A great many resources have been spent on bringing the subregions together however overall results remain below the potential One of the main reasons for the slow progress is the decision making process for cross border projects Energy markets do not connect by themselves in the next few decades actions will be needed to build physical energy networks institutional connectivity and most importantly trust between nations to meet the Region's two most important challenges overcoming energy poverty and mitigating climate change Governments policymakers and experts must work together in partnership with the private sector to provide sustainable energy for all by 2050 by connecting Asian energy networks and building institutions of integration ESCAP is in a unique position to lead such a transformative partnership for ensuring that regional energy connectivity creates incentive structures and institutions to deliver cost effective energy for the entire Region It is time to build energy connectivity for an interdependent Asia and the Pacific prosperous and connected thus ending Asian economic dependence on a single source or a single fuel

Toward a Sustainable Energy Future International Energy Agency, Organisation for Economic Co-operation and Development,2001 The manner in which we produce consume energy is of crucial importance to sustainable development as energy has deep relationships with each of its three dimensions the economy the environment social welfare These relationships develop in a fast moving complex situation characterized by increasing globalisation growing market liberalisation new technologies as well as by growing concerns about climate change energy supply security In order to make energy an integral part of sustainable development new policies need to be developed Such policies must strike a balance among the three dimensions of sustainable development They must reduce our exposure to large scale risk The IEA has synthesized a number of experiences with policies aimed to promote sustainable development These experiences are reported in seven subject chapters on energy supply security market reform improving energy efficiency renewable energies sustainable transport flexibility mechanisms for greenhouse gas reductions on non Member countries

The New Energy Crisis Jean-Marie Chevalier,2009-05-29 The New Energy Crisis comes from the recent intrusion of climate change issues into energy economics and geopolitics Global warming suddenly reveals that the current evolution of the world energy consumption is on an unsustainable path This book explores economic and geopolitical tensions and reinforces ways to overcome the crisis

Energy to 2050 Maria Rosa Virdis,2003 Analysing the interaction between energy and climate change mitigation issues requires the adoption of a long term perspective looking up to fifty years ahead The future cannot be predicted particularly

over longer periods. However, strategic planning and political decisions demand that we explore options for the future and these are best developed through scenarios, conjectures as to what might happen in the future based on our past and present experience of the world and on plausible speculation about how these trends may further evolve. This volume looks at different types of scenarios, evaluating how they can be used to analyse specific aspects of the interaction between energy and environment over the longer term. It examines exploratory scenarios based on different expectations of technical and/or policy developments over the next 50 years and normative scenarios based on a set of desirable features or norms that the future world should possess. These long-term scenarios complement the IEA's World Energy Outlook, which presents a mid-term business-as-usual scenario with some variants.
