Mechatronics in Action David Bradley, David W. Russell, 2010-04-15 Mechatronics in Action s case study approach provides the most effective means of illustrating how mechatronics can make products and systems more flexible more responsive and possess higher levels of functionality than would otherwise be possible The series of case studies serves to illustrate how a mechatronic approach has been used to achieve enhanced performance through the transfer of functionality from the mechanical domain to electronics and software Mechatronics in Action not only provides readers with access to a range of case studies and the experts view of these but also offers case studies in course design and development to support tutors in making the best and most effective use of the technical coverage provided It provides in an easily accessible form a means of increasing the understanding of the mechatronic concept while giving both students and tutors substantial technical insight into how this concept has been developed and used

Electronic Beam Steering and Polarization Agile Planar Antennas in Liquid Crystal Technology Onur Hamza Karabey, 2013-08-04 This book describes the characterization of liquid crystal materials at microwave frequencies and the usage of these materials in reconfigurable planar antennas and in their electrical tunable components It reports for the first time the realization of a two dimensional electronic beam steering antenna and polarization agile planar antennas with liquid crystal display technology It gives a detailed description of all the theoretical analyses modeling and design methods that were involved in the realization of these devices as well as their validation using measurement of demonstrative prototypes This book also shows that low profile low cost high gain electronic beam steering and polarization agile antennas can be fabricated in larger sizes by using existing automated liquid crystal display manufacturing techniques The innovative ideas and method described in this work represent a considerable advancement in

the field of electronically reconfigurable antennas based on liquid crystal technology and are expected to draw significant interest in the future Such antennas may become important for example in mobile terminals integrated into the body of laptops in the cover or of automobiles in the rooftop ships or boats for which flat low profile and low cost antennas are required
