Holt,2013-04-01 Many students of linear algebra hit a wall at mid semester Having spent the first part of the term doing  
mostly computational work they are unprepared for the rigors of conceptual thinking in an abstract setting that is frequently  
the focus of the second half of the course Holt s Linear Algebra with Applications blends computational and conceptual topics  
throughout Early treatment of conceptual topics in the context of Euclidean space gives students more time and a familiar  
setting in which to absorb them This organization also makes it possible to treat eigenvalues and eigenvectors earlier than in  
most texts Abstract vector spaces are introduced later once students have developed a solid conceptual foundation Concepts  
and topics are frequently accompanied by applications to provide context and motivation Because many students learn by  
example Linear Algebra with Applications provides a large number of representative examples over and above those used to  
introduce topics The text also has over 2500 exercises covering computational and conceptual topics over a range of  
difficulty levels      **Catalogue of Title-entries of Books and Other Articles Entered in the Office of the Librarian of
