*Fundamentals of Evolutionary Genetics* Masroor Elahi Babar, Muhammad Ashraf, 2025-05-06 This book very carefully explains the fundamental processes of evolutionary genetics such as mutation natural selection genetic drift and speciation It discusses the role of these concepts in evolution and what the consequences are of their overacting and depressive behavior It gives an up to date overview of the studies on Evolutionary Genetics and the fundamentals of the relationships between genetics and evolution irrespective of the environment organisms inhabit Further discussion can be found on the structure of genetics theories of Darwin and Mendel evolutionary mechanisms and genetics and species formation gene flow phenotypic evolution behavioral genetics genetics and developmental evolution genetic manipulation and control of convergent evolution theory of adaptation in animals and transmission of adaptive changes to the next generation possible variations in natural populations and their causes and finally the origin of new genes and their impacts on evolutionary process and phenotypic expressions

*Life Underground* Eileen A. Lacey, 2000-09 Many mammals like to dig in the dirt but few call it home Those that do such as mole rats zokors and tuco tucos have developed novel adaptations to their subterranean life including bones and muscles modified for efficient digging and ways to see underground without using their eyes These unusual traits adopted independently by unrelated groups around the world also make subterranean rodents fascinating subjects for biologists *Life Underground* provides the first comprehensive review of the biology of subterranean rodents Arranged by topic rather than by taxon to facilitate cross species comparisons chapters cover such subjects as morphology physiology social behavior genetic variation and evolutionary diversification Two main questions run throughout the book First to what extent has subterranean life shaped the biology of these animals leading to similar adaptations among otherwise dissimilar species Second how have the distinct evolutionary histories of these groups led to different solutions to the challenges posed by life underground

**Bonhoeffer and Climate Change** Dianne Rayson,2021-05-25 Where is the voice of theology in the public discourse around anthropogenic climate change How do we understand the human relationship to Earth and the ecology of which we are a part How can we account for the human attempt to dominate nature and the devastation we have caused to our own home Dianne Rayson addresses these questions She uses the creation theology of Dietrich Bonhoeffer to examine what it means to be human in the post Holocene age Employing a range of Bonhoeffer s texts Rayson posits that Bonhoeffer s Christological theology and this worldly ethical orientation provide the tools for an Earthly Christianity She responds to Bonhoeffer s question who actually is Jesus Christ for us today and proposes
