Parse Completion A Study Of An Inductive Domain:

Parse Completion Steven J. Nowlan, Artificial Intelligence and Psychology Project, Carnegie-Mellon University. Department of Psychology, 1987 This paper presents a theoretical explanation of this class that attempts to understand what makes this induction problem difficult and to suggest where appropriate biases might lie to limit the search without overly restricting the richness of discoverable solutions The explorations in this paper are not intended to produce a practical induction algorithm although fruitful paths for such development are suggested

Architectures for Intelligence Kurt Van Lehn, 2014-01-14 This unique volume focuses on computing systems that exhibit intelligent behavior As such it discusses research aimed at building a computer that has the same cognitive architecture as the mind permitting evaluations of it as a model of the mind and allowing for comparisons between computer performance and experimental data on human performance It also examines architectures that permit large complex computations to be performed and questions whether the computer so structured can handle these difficult tasks intelligently

Mind Bugs Kurt VanLehn, 1990 As children acquire arithmetic skills they often develop bugs small local misconceptions that cause systematic errors *Mind Bugs* combines a novel cognitive simulation process with careful hypothesis testing to explore how mathematics students acquire procedural skills in instructional settings focusing in particular on these procedural misconceptions and what they reveal about the learning process

Machine Learning Tom M. Mitchell, Jaime G. Carbonell, Ryszard S. Michalski, 2012-12-06 One of the currently most active research areas within Artificial Intelligence is the field of Machine Learning which involves the study and development of computational models of learning processes A major goal of research in this field is to build computers capable of improving their performance with practice and of acquiring knowledge on their own The intent of this book is to provide a snapshot of this field through a broad representative set of easily assimilated short papers As such this book is intended to complement the two volumes of *Machine Learning An Artificial Intelligence Approach* Morgan Kaufman Publishers which provide a smaller number of in depth research papers Each of the 77 papers in the present book summarizes a current research effort and provides references to longer expositions appearing elsewhere These papers cover a broad range of topics including research on analogy conceptual clustering explanation based generalization incremental learning inductive inference learning apprentice systems machine discovery theoretical models of learning and applications of machine learning methods A subject index IS provided to assist in locating research related to specific topics The majority of these papers were collected from the participants at the Third International Machine Learning Workshop held June 24 26 1985 at Skytop Lodge Skytop Pennsylvania While the list of research projects covered is not exhaustive we believe that it provides a representative sampling of the best ongoing work in the field and a unique perspective on where the field is and where it is headed

[Developing Enterprise Chatbots](#) Boris Galitsky, 2019-04-04 A chatbot is expected to be capable of

supporting a cohesive and coherent conversation and be knowledgeable which makes it one of the most complex intelligent systems being designed nowadays. Designers have to learn to combine intuitive explainable language understanding and reasoning approaches with high performance statistical and deep learning technologies. Today there are two popular paradigms for chatbot construction: 1. Build a bot platform with universal NLP and ML capabilities so that a bot developer for a particular enterprise not being an expert can populate it with training data. 2. Accumulate a huge set of training dialogue data, feed it to a deep learning network, and expect the trained chatbot to automatically learn how to chat. Although these two approaches are reported to imitate some intelligent dialogues, both of them are unsuitable for enterprise chatbots, being unreliable and too brittle. The latter approach is based on a belief that some learning miracle will happen and a chatbot will start functioning without a thorough feature and domain engineering by an expert and interpretable dialogue management algorithms. Enterprise high performance chatbots with extensive domain knowledge require a mix of statistical inductive deep machine learning and learning from the web syntactic semantic and discourse NLP ontology based reasoning and a state machine to control a dialogue. This book will provide a comprehensive source of algorithms and architectures for building chatbots for various domains based on the recent trends in computational linguistics and machine learning. The foci of this book are applications of discourse analysis in text relevant assessment, dialogue management, and content generation, which help to overcome the limitations of platform based and data driven based approaches. Readings in Machine Learning Jude W. Shavlik, Thomas Glen Dietterich, 1990. The ability to learn is a fundamental characteristic of intelligent behavior. Consequently, machine learning has been a focus of artificial intelligence since the beginnings of AI in the 1950s. The 1980s saw tremendous growth in the field, and this growth promises to continue with valuable contributions to science, engineering, and business. *Readings in Machine Learning* collects the best of the published machine learning literature, including papers that address a wide range of learning tasks and that introduce a variety of techniques for giving machines the ability to learn. The editors, in cooperation with a group of expert referees, have chosen important papers that empirically study, theoretically analyze, or psychologically justify machine learning algorithms. The papers are grouped into a dozen categories, each of which is introduced by the editors.

Artificial Neural Nets and Genetic Algorithms George D. Smith, Nigel C. Steele, 1998 This is the third in a series of conferences devoted primarily to the theory and applications of artificial neural networks and genetic algorithms The first such event was held in Innsbruck Austria in April 1993 the second in Ales France in April 1995 We are pleased to host the 1997 event in the mediaeval city of Norwich England and to carry on the fine tradition set by its predecessors of providing a relaxed and stimulating environment for both established and emerging researchers working in these and other related fields This series of conferences is unique in recognising the relation between the two main themes of artificial neural networks and genetic algorithms each having its origin in a natural process fundamental to life on earth and each now well established as a paradigm fundamental to continuing technological development through the solution of complex industrial commercial and financial problems This is well illustrated in this volume by the numerous applications of both paradigms to new and challenging problems The third key theme of the series therefore is the integration of both technologies either through the use of the genetic algorithm to construct the most effective network architecture for the problem in hand or more recently the use of neural networks as approximate fitness functions for a genetic algorithm searching for good solutions in an incomplete solution space i e one for which the fitness is not easily established for every possible solution instance
