**Cycles: the Science of Prediction** Edward Dewey,Edwin Dakin,2013-11-13 In 1947 Edward R Dewey and Edwin F Dakin published their book *Cycles The Science of Prediction* which argued the United States economy was driven by four cycles of different length Dewey devoted his life to the study of cycles claiming that everything that has been studied has been found to have cycles present He carried out extensive studies of cyclicity in economic geological biological sociology physical sciences and other disciplines As a result of his research Dewey asserted that seemingly unrelated time series often had similar cycles periods present and that when they did the phase of these cycles was mostly very similar cycle synchrony He also said that there were many cycles with periods that were related by powers or products of 2 and 3 Dewey understood his cycle theory to be capable of understanding what the market is going to do and of predicting what may come
