Data Quality The Field Guide:

Data Quality Thomas C. Redman, 2001-01-11 Can any subject inspire less excitement than data quality Yet a moment's thought reveals the ever growing importance of quality data From restated corporate earnings to incorrect prices on the web to the bombing of the Chinese Embassy the media reports the impact of poor data quality on a daily basis Every business operation creates or consumes huge quantities of data If the data are wrong time money and reputation are lost In today's environment every leader every decision maker every operational manager every consumer indeed everyone has a vested interest in data quality *Data Quality The Field Guide* provides the practical guidance needed to start and advance a data quality program It motivates interest in data quality describes the most important data quality problems facing the typical organization and outlines what an organization must do to improve It consists of 36 short chapters in an easy to use field guide format Each chapter describes a single issue and how to address it The book begins with sections that describe why leaders whether CIOs CFOs or CEOs should be concerned with data quality It explains the pros and cons of approaches for addressing the issue It explains what those organizations with the best data do And it lays bare the social issues that prevent organizations from making headway Field tips at the end of each chapter summarize the most important points Allows readers to go directly to the topic of interest Provides web based material so readers can cut and paste figures and tables into documents within their organizations Gives step by step instructions for applying most techniques and summarizes what works

Handbook of Data Quality Shazia Sadiq, 2013-08-13 The issue of data quality is as old as data itself However the proliferation of diverse large scale and often publically available data on the Web has increased the risk of poor data quality and misleading data interpretations On the other hand data is now exposed at a much more strategic level e g through business intelligence systems increasing manifold the stakes involved for individuals corporations as well as government agencies There the lack of knowledge about data accuracy currency or completeness can have erroneous and even catastrophic results With these changes traditional approaches to data management in general and data quality control specifically are challenged There is an evident need to incorporate data quality considerations into the whole data cycle encompassing managerial governance as well as technical aspects Data quality experts from research and industry agree that a unified framework for data quality management should bring together organizational architectural and computational approaches Accordingly Sadiq structured this handbook in four parts Part I is on organizational solutions i e the development of data quality objectives for the organization and the development of strategies to establish roles processes policies and standards required to manage and ensure data quality Part II on architectural solutions covers the technology landscape required to deploy developed data quality management processes standards and policies Part III on computational solutions presents effective and efficient tools and techniques related to record linkage lineage and provenance data uncertainty and advanced integrity constraints Finally Part IV is devoted to case studies of successful data quality initiatives that highlight

the various aspects of data quality in action The individual chapters present both an overview of the respective topic in terms of historical research and or practice and state of the art as well as specific techniques methodologies and frameworks developed by the individual contributors Researchers and students of computer science information systems or business management as well as data professionals and practitioners will benefit most from this handbook by not only focusing on the various sections relevant to their research area or particular practical work but by also studying chapters that they may initially consider not to be directly relevant to them as there they will learn about new perspectives and approaches

Forest Inventory and Analysis National Data Quality Assessment Report for 2000 to 2003 James E. Pollard, 2006 The Forest Inventory and Analysis program FIA is the key USDA Forest Service USFS program that provides the information needed to assess the status and trends in the environmental quality of the Nation s forests The goal of the FIA Quality Assurance QA program is to provide a framework to assure the production of complete accurate and unbiased forest information of known quality Specific Measurement Quality Objectives MQO for precision are designed to provide a window of performance that we are striving to achieve for every field measurement These data quality goals were developed from knowledge of measurement processes in forestry and forest ecology as well as the program needs of FIA This report is a national summary and compilation of MQO analyses by regional personnel and the National QA Advisor The efficacy of the MQO as well as the measurement uncertainty associated with a given field measurement can be tested by comparing data from blind check plots where in addition to the field measurements of the standard FIA crew a second QA measurement of the plot was taken by a crew without knowledge of the first crew s results These QA data were collected between 2000 and 2003 and analyzed for measurement precision between FIA crews The charge of this task team was to use the blind check data to assess the FIA program s ability to meet data quality goals as stated by the MQO The results presented indicate that the repeatability was within project goals for a wide range of measurements across a variety of forest and nonforest environments However there were some variables that displayed noncompliance with MQO goals In general there were two types of noncompliance the first is where all the regions were below the MQO standard and the second is where a subset of the regions was below the MQO standards or was substantially different from the other remaining regions Results for each regional analysis are presented in appendix tables In the course of the study the task team discovered that there were difficulties in analyzing seedling species and seedling count variables for MQO compliance and recommends further study of the issue Also the task team addresses the issue of trees missed or added and recommends additional study of this issue Lastly the team points out that traditional MQO analysis of the disturbance and treatment variables may not be adequate Some attributes where regional compliance rates are dissimilar suggest that regional characteristics environmental variables such as forest type physiographic class and forest fragmentation may have an impact on the ability to obtain consistent measurements Additionally differences in data collection protocols may cause differences in compliance rates For example a

particular variable may be measured with a calibrated instrument in one region while ocularly estimated in another region
