*Data Structures for Computational Statistics* Sigbert Klinke,1997-05-20      *Computational Statistics* ,1994      *Data Structures for Computational Statistics* S. Klinke,1997-05-20 The development of data structures for a statistical software system is treated in this book Data structures e.g storage of statistical data handling of different kind of graphics are very important in designing a software system A misspecification or too narrow approach will lead to an enormous amount of reprogramming if it is possible Chapters deal with exploratory statistical techniques some statistical applications exploratory projection pursuit data structures and implementation in XploRe Examples are given with several statistical techniques e.g teachware cluster analysis non parametric regression and exploratory projection pursuit      *Causality, Correlation And Artificial Intelligence For Rational Decision Making* Tshilidzi Marwala,2015-01-02 Causality has been a subject of study for a long time Often causality is confused with correlation Human intuition has evolved such that it has learned to identify causality through correlation In this book four main themes are considered and these are causality correlation artificial intelligence and decision making A correlation machine is defined and built using multi layer perceptron network principal component analysis Gaussian Mixture models genetic algorithms expectation maximization technique simulated annealing and particle swarm optimization Furthermore a causal machine is defined and built using multi layer perceptron radial basis function Bayesian statistics and Hybrid Monte Carlo methods Both these machines are used to build a Granger non linear causality model In addition the Neyman Rubin Pearl and Granger causal models are studied and are unified The automatic relevance determination is also applied to extend Granger causality framework to the non linear domain The concept of rational decision making is studied and the theory of flexibly bounded rationality is used to extend the theory of bounded rationality within the principle of the indivisibility of rationality The theory of the marginalization of irrationality for decision making is also introduced to deal with satisficing within irrational conditions The methods proposed are applied in biomedical engineering condition monitoring and for modelling interstate conflict      **Statistical Learning and Data Science** Mireille Gettler Summa,Leon Bottou,Bernard Goldfarb,Fionn Murtagh,Catherine Pardoux,Myriam Touati,2011-12-19 Data analysis is changing fast Driven by a vast range of application domains and affordable tools machine learning has become mainstream Unsupervised data analysis including cluster analysis factor analysis and low dimensionality mapping methods continually being updated have reached new heights of achievement in the incredibly rich data wor      Statistical Modeling Using Bayesian Latent Gaussian Models Birgir Hrafnkelsson,2023-11-08 This book focuses on the statistical modeling of geophysical and environmental data using Bayesian latent Gaussian models The structure of these models is described in a thorough introductory chapter which explains how to construct prior densities for the model parameters how to infer the parameters using Bayesian computation and how to use the models to make predictions The remaining six chapters focus on the application of Bayesian latent Gaussian models to real examples in glaciology hydrology engineering

seismology seismology meteorology and climatology These examples include spatial predictions of surface mass balance the estimation of Antarctica's contribution to sea level rise the estimation of rating curves for the projection of water level to discharge ground motion models for strong motion spatial modeling of earthquake magnitudes weather forecasting based on numerical model forecasts and extreme value analysis of precipitation on a high dimensional grid The book is aimed at graduate students and experts in statistics geophysics environmental sciences engineering and related fields

**Handbook on Data Management in Information Systems** Jacek Blazewicz, Wieslaw Kubiak, Tadeusz Morzy, Marek Rusinkiewicz, 2012-12-06 This book is the sixth of a running series of volumes dedicated to selected topics of information theory and practice The objective of the series is to provide a reference source for problem solvers in business industry government and professional researchers and graduate students The first volume Handbook on Architecture of Information Systems presents a balanced number of contributions from academia and practitioners The structure of the material follows a differentiation between modeling languages tools and methodologies The second volume Handbook on Electronic Commerce examines electronic commerce storefront online business consumer interface business to business networking digital payment legal issues information product development and electronic business models The third volume Handbook on Parallel and Distributed Processing presents basic concepts methods and recent developments in the field of parallel and distributed processing as well as some important applications of parallel and distributed computing In particular the book examines such fundamental issues in the above area as languages for parallel processing parallel operating systems architecture of parallel and distributed systems parallel database and multimedia systems networking aspects of parallel and distributed systems efficiency of parallel algorithms The fourth volume on Information Technologies for Education and Training is devoted to a presentation of current and future research and applications in the field of educational technology The fifth double volume on Knowledge Management contains an extensive fundamental coverage of the knowledge management field

*Computational Statistics* Peter Dirschedl (ed), Rüdiger Ostermann, 1994-11-25 This book is a collection of thirty invited papers covering the important parts of a rapidly developing area like computational statistics All contributions supply information about a specialized topic in a tutorial and comprehensive style Newest results and developments are discussed Starting with the foundations of computational statistics i.e. numerical reliability of software packages or construction principles for pseudorandom number generators the volume includes design considerations on statistical programming languages and the basic issues of resampling techniques Also covered are areas like design of experiments graphical techniques modelling and testing problems a review of clustering algorithms and concise discussions of regression trees or cognitive aspects of authoring systems

*Proceedings of the ... ACM CIKM*, 2003

**Microsatellite Markers** Ibrokhim Y. Abdurakhmonov, 2016-11-30 Microsatellite or so called simple sequence repeat SSR markers have been one of the most reliable molecular markers derived from the DNA molecule which were widely and successfully used for

more than 25 years in the genetic studies of environmental agricultural and biomedical sciences The objective of this Microsatellite Markers book is to rehighlight and provide some updates on previous and recent utilization of microsatellite markers for various applications in agriculture and medicine which void emerging opinion on full death of microsatellites as useful genetic markers Chapters presented here demonstrate the future benefit of SSRs in many genetic studies as well as disease diagnosis and prognosis
