and empirical examples 400 graphs and figures and 30 case studies many of which are contained in interactive Excel spreadsheets available from the the accompanying CD ROM Empirical examples and case studies specific to this volume include Factor analysis with orthogonal regressions and using principal component factors Estimation of symmetric and asymmetric normal and Student t GARCH and E GARCH parameters Normal Student t Gumbel Clayton normal mixture copula densities and simulations from these copulas with application to VaR and portfolio optimization Principal component analysis of yield curves with applications to portfolio immunization and asset liability management Simulation of normal mixture and Markov switching GARCH returns Cointegration based index tracking and pairs trading with error correction and impulse response modelling Markov switching regression models Eviews code GARCH term structure forecasting with volatility targeting Non linear quantile regressions with applications to hedging

Market Risk Analysis, Boxset Carol Alexander, 2009-02-24 Market Risk Analysis is the most comprehensive rigorous and detailed resource available on market risk analysis Written as a series of four interlinked volumes each title is self contained although numerous cross references to other volumes enable readers to obtain further background knowledge and information about financial applications Volume I Quantitative Methods in Finance covers the essential mathematical and financial background for subsequent volumes Although many readers will already be familiar with this material few competing texts contain such a complete and pedagogical exposition of all the basic quantitative concepts required for market risk analysis There are six comprehensive chapters covering all the calculus linear algebra probability and statistics numerical methods and portfolio mathematics that are necessary for market risk analysis This is an ideal background text for a Masters course in finance Volume II Practical Financial Econometrics provides a detailed understanding of financial econometrics with applications to asset pricing and fund management as well as to market risk analysis It covers equity factor models including a detailed analysis of the Barra model and tracking error principal component analysis volatility and correlation GARCH cointegration copulas Markov switching quantile regression discrete choice models non linear regression forecasting and model evaluation Volume III Pricing Hedging and Trading Financial Instruments has five very long chapters on the pricing hedging and trading of bonds and swaps futures and forwards options and volatility as well detailed descriptions of mapping portfolios of these financial instruments to their risk factors There are numerous examples all coded in interactive Excel spreadsheets including many pricing formulae for exotic options but excluding the calibration of stochastic volatility models for which Matlab code is provided The chapters on options and volatility together constitute 50% of the book the slightly longer chapter on volatility concentrating on the dynamic properties the two volatility surfaces the implied and the local volatility surfaces that accompany an option pricing model with particular reference to hedging Volume IV Value at Risk Models builds on the three previous volumes to provide by far the most comprehensive and detailed treatment of market VaR models that is currently available in any textbook The exposition starts at an elementary level but as in all the other volumes the pedagogical

approach accompanied by numerous interactive Excel spreadsheets allows readers to experience the application of parametric linear historical simulation and Monte Carlo VaR models to increasingly complex portfolios Starting with simple positions after a few chapters we apply value at risk models to interest rate sensitive portfolios large international securities portfolios commodity futures path dependent options and much else This rigorous treatment includes many new results and applications to regulatory and economic capital allocation measurement of VaR model risk and stress testing
