Brant,2008 *A Full Matlab Code for Computing a Novel Hybrid Solc Filter* Fethallah Karim,2017-05-05 Filter Design for Signal Processing Using MATLAB and Mathematica Miroslav D. Lutovac,Dejan V. Tošić,Brian Lawrence

Evans,2001 A complete up to date reference for advanced analog and digital IIR filter design rooted in elliptic functions Revolutionary in approach this book opens up completely new vistas in basic analog and digital IIR filter design regardless of the technology By introducing exceptionally elegant and creative mathematical stratagems e g accurate replacement of Jacobi elliptic functions by functions comprising polynomials square roots and logarithms optimization routines carried out with symbolic analysis by Mathematica and the advance filter design software of MATLAB it shows readers how to design many types of filters that cannot be designed using conventional techniques The filter design algorithms can be directly programed in any language or environment such as Visual BASIC Visual C Maple DERIVE or MathCAD Signals Systems Transforms Classical Analog Filter Design Advanced Analog Filter Design Case Studies Advanced Analog Filter Design Algorithms Multi criteria Optimization of Analog Filter Designs Classical Digital Filter Design Advanced Digital Filter Design Case Studies Advanced Digital Filter Design Algorithms Multi criteria Optimization of Digital Filter Designs Elliptic Functions Elliptic Rational Function **Digital Filters Using MATLAB** ,2011 **MATLAB Implementation of the Steganographic Algorithm F5** Wassim Al Chamaa,2019-05-07 Project Report from the year 2018 in the subject Computer Science Programming language English abstract The F5 algorithm proposed by Westfeld is still one of the most known algorithms in the field of DCT based steganography It can make a JPEG image a container of a secret message where no one knows the presence of the message except the sender and the intended receiver In this programming work we show how to realize the F5 algorithm via Matlab We present the block diagrams of embedding and extracting processes and the entire Matlab code of the F5 algorithm Some Notes about the F5 Matlab code 1 The implementation code works according to the method proposed by Andreas Westfield in his paper F5 A Steganographic Algorithm High Capacity Despite Better Steganalysis Huffman coding and decoding are implemented using the Matlab JPEG Toolbox developed by Phil Sallee 2 The two part Matlab code included in the report embedding and extracting parts can be executed in Matlab IDE The embedding part reads the cover JPEG file and the message file we want to hide then it creates a Stego JPEG file according to the F5

algorithm On the other side The extracting part reads the Stego JPEG file and then it extracts the hidden message file 3 The F5 code calls the main two functions of Phil Sallee s Matlab Toolbox JPEG reading and writing These functions make it easier to access and manipulate the quantized DCT coefficients of a given JPEG file Using Sallee s Toolbox should accord with the used operating system whether it is 32 or 64 bits 4 The F5 code contains the function to form the image matrix to show the input and output images Running this function requires ALL the Sallee s Toolbox to be installed Otherwise the user can REMOVE this function from the code since it doesn t affect the main F5 process and thus keep ONLY using the main two function of the Sallee s Toolbox 5 The message file we want to hide can be any file of any kind and whatever its extension The size of the message file should be appropriate for the size of the used cover JPEG image so no errors will occur when executed
