Clegg, 2008-02-04 It is by no means a revelation that proteins are not uniformly distributed throughout the cell As a result the idea that protein molecules because of the specificity with which they can engage in interactions with other proteins may be aimed via these interactions at a restricted target is a fundamental one in contemporary molecular life sciences The target may be variously conceived as a specific molecule a group of molecules a structure or a more generic type of intracellular environment Because the concept of protein targeting is intuitive rather than explicitly defined it has been variously used by different groups of researchers in cell biology biochemistry and molecular biology For those working in the field of intracellular signaling an influential introduction to the topic was the seminal article by Hubbard Cohen *TIBS* 1993 18 172 177 which was based on the work of Cohen's laboratory on protein phosphatases Subsequently the ideas that they discussed have been further developed and extended by many workers to other key intermediaries in intracellular signaling including protein kinases and a great variety of modulator and adaptor proteins *Current Protocols in Molecular Biology Tabs Reprint* Frederick M.
