(Class – XII)

## Question 1:

Fill in the blanks:

- Humans reproduce \_\_\_\_\_. (asexually/sexually)
- Humans are \_\_\_\_\_. (oviparous/viviparous/ovoviviparous)
- Fertilization is \_\_\_\_\_ in humans. (external/internal)
- Male and female gametes are \_\_\_\_\_. (diploid/haploid)
- Zygote is \_\_\_\_\_. (diploid/haploid)
- The process of release of the ovum from a mature follicle is called \_\_\_\_\_.
- Ovulation is induced by a hormone called the \_\_\_\_\_.
- The fusion of the male and the female gametes is called \_\_\_\_\_.
- Fertilization takes place in the \_\_\_\_\_.
- The zygote divides to form \_\_\_\_\_, which is implanted in uterus.
- The structure which provides vascular connection between the fetus and uterus is called \_\_\_\_\_.

## Answer 1:

- Humans reproduce *sexually*.
- Humans are *viviparous*.
- Fertilization is *internal* in human.
- Male and female gametes are *haploid*.
- Zygote is *diploid*.
- The process of release of the ovum from a mature follicle is called *ovulation*.
- Ovulation is induced by a hormone called the *luteinizing hormone*.
- The fusion of the male and the female gametes is called *fertilization*.
- Fertilization takes place in the *fallopian tube*.
- The zygote divides to form *blastocyst*, which is *fertilization* implanted in uterus.
- The structure which provides vascular connection between the fetus and uterus is called *placenta*.

**Nucleation in Condensed Matter** Ken Kelton, Alan Lindsay Greer, 2010-03-19 In Nucleation in Condensed Matter key theoretical models for nucleation are developed and experimental data are used to discuss their range of validity A central aim of this book is to enable the reader when faced with a phenomenon in which nucleation appears to play a role to determine whether nucleation is indeed important and to develop a quantitative and predictive description of the nucleation behavior The third section of the book examines nucleation processes in practical situations ranging from solid state precipitation to nucleation in biological systems to nucleation in food and drink Nucleation in Condensed Matter is a key reference for an advanced materials course in phase transformations It is also an essential reference for researchers in the field Unified treatment of key theories experimental evaluations and case studies Complete derivation of key models Detailed discussion of experimental measurements Examples of nucleation in diverse systems Continuants David Wiggins, 2016-11-17 This volume gathers twelve essays by David Wiggins in an area where his work has been particularly influential Among the subjects treated are persistence of a substance through change the notion of a continuant the logic of identity the co occupation of space by a continuant and its matter the relation of person to human organism the metaphysical idea of a person the status of artefacts the relation of the three dimensional and four dimensional conceptions of reality and the nomological underpinning of sortal classification From a much larger body of work the author has selected edited or annotated and variously shortened or extended eleven pieces He has added an Introduction and one completely new essay on the philosophy of biology and the role there of the idea of process The collection begins with an essay postdating his Sameness and Substance Renewed 2001 which amends and upstages his earlier presentation of his sortalist conception of identity In subsequent essays and the introduction Wiggins examines the contributions to these subjects made by Heraclitus Aristotle Leibniz Roderick Chisholm Hilary Putnam Sydney Shoemaker Michael Ayers Saul Kripke W V Quine David Lewis Fei Xu and others **La Selva** Lucinda A. science accompanied by the separation of economics from the other social sciences especially economic history and sociology. It is argued that recent attempts from within economics to address the social and the historical have failed to acknowledge long standing debates amongst economists historians and other social scientists. This has resulted in an impoverished historical and social content within mainstream economics. The book ranges over the shifting role of the historical and the social in economic theory the shifting boundaries between the economic and the non economic all within a methodological context. Schools of thought and individuals that have been neglected or marginalised are treated in full including classical political economy and Marx the German and British historical schools American institutionalism Weber and Schumpeter and their programme of Social konomik and the Austrian school. At the same time developments within the mainstream tradition from marginalism through Marshall and Keynes to general equilibrium theory are also scrutinised and the clashes between the various camps from the famous Methodenstreit to the fierce debates of the 1930s and beyond brought to the fore. The prime rationale underpinning this account drawn from the past is to put the case for political economy back on the agenda. This is done by treating economics as a social science once again rather than as a positive science as has been the inclination since the time of Jevons and Walras. It involves transcending the boundaries of the social sciences but in a particular way that is in exactly the opposite direction now being taken by economics imperialism. Drawing on the rich traditions of the past the reintroduction and full incorporation of the social and the historical into the main corpus of political economy will be possible in the future.

With more than 1 200 full color illustrations the book shows the body's bones and joints and how muscles function as movers antagonists and stabilizers. Part I covers the fundamentals of structure and motion. Part II covers the skeletal system including skeletal and fascial tissues. Part III contains a detailed study of the joints of the body. And finally Part IV examines how muscles function. Written by noted lecturer and educator Joseph Muscolino this text includes access to an Evolve website with 150 video clips demonstrating major joint actions of the body as well as muscle palpation. Complete atlas of bones bony landmarks and joints includes hundreds of full color illustrations providing comprehensive coverage of bones not found in other kinesiology books. Clear straightforward explanations of kinesiology concepts cover muscle contraction's coordination of muscles with movement core stabilization posture exercise reflexes and how the nervous system controls and directs the muscular system. Coverage of strengthening exercises and stretching emphasizes the purposes and benefits of stretching and how to perform various stretching techniques. Information on posture and the gait cycle includes

illustrations of all of the muscles of the human body organized by function Clinical applications challenge students to apply kinesiology concepts to clinical practice Light bulb and Spotlight boxes discuss applications of the content including pathologic conditions and clinical scenarios Learning objectives at the start of each chapter include a chapter outline overview key terms and pronunciations and word origins NEW Expanded coverage of fascia includes new perspectives from all new contributors including the role of fascia in movement stability and posture *Chromatin and Epigenetics* Colin Logie, Tobias Aurelius Knoch, 2020-01-29 Genomics has gathered broad public attention since Lamarck put forward his top down hypothesis of motivated change in 1809 in his famous book *Philosophie Zoologique* and even more so since Darwin published his famous bottom up theory of natural selection in *The Origin of Species* in 1859 The public awareness culminated in the much anticipated race to decipher the sequence of the human genome in 2002 Over all those years it has become apparent that genomic DNA is compacted into chromatin with a dedicated 3D higher order organization and dynamics and that on each structural level epigenetic modifications exist The book *Chromatin and Epigenetics* addresses current issues in the fields of epigenetics and chromatin ranging from more theoretical overviews in the first four chapters to much more detailed methodologies and insights into diagnostics and treatments in the following chapters The chapters illustrate in their depth and breadth that genetic information is stored on all structural and dynamical levels within the nucleus with corresponding modifications of functional relevance Thus only an integrative systems approach allows to understand treat and manipulate the holistic interplay of genotype and phenotype creating functional genomes The book chapters therefore contribute to this general perspective not only opening opportunities for a true universal view on genetic information but also being key for a general understanding of genomes their function as well as life and evolution in general Votes & Proceedings New South Wales.
