Bitcoin A Peer To Peer Electronic Cash System:

Bitcoin, a Peer-to-peer Electronic Cash System Satoshi Nakamoto, 2008 A purely peer to peer version of electronic cash would allow online payments to be sent directly from one party to another without going through a financial institution Digital signatures provide part of the solution but the main benefits are lost if a trusted third party is still required to prevent double spending We propose a solution to the double spending problem using a peer to peer network The network timestamps transactions by hashing them into an ongoing chain of hash based proof of work forming a record that cannot be changed without redoing the proof of work The longest chain not only serves as proof of the sequence of events witnessed but proof that it came from the largest pool of CPU power As long as a majority of CPU power is controlled by nodes that are not cooperating to attack the network they ll generate the longest chain and outpace attackers The network itself requires minimal structure Messages are broadcast on a best effort basis and nodes can leave and rejoin the network at will accepting the longest proof of work chain as proof of what happened while they were gone

virtual currency keep improving itself to make competition obsolete Traditional classifications for currencies do not adequately apply to Bitcoin It is a new type of financial technology that entered the global market in 2008 and has since been able to draw the attention of investors business leaders regulators and politicians Whereas a Dollar Yen Yuan or Euro can be held like a currency they cannot be secured and transacted simply by itself Individuals have to rely on third party intermediaries in order to transfer funds for them and in order to store them securely Contrary to that one cannot focus on Bitcoin as a currency without acknowledging that it is also a transaction system in itself and would not be able to function is one part of this duality is gone In fact it is even more precise to look at Bitcoin as a decentralized transaction and financial services system with a currency function being only one aspect of the technology In this book Bitcoin Ripple cryptocurrency financial technology financial service virtual currency
