Smith, 1977 *Human Factors and Design* Yuri Spirochkin, 2023-02-27 This book describes various manifestations of human factors when interacting with potentially dangerous technical systems airplanes launch vehicles and spaceships nuclear power plants energy saturated ground vehicles and infrastructure facilities The idea of the book arose from the desire to find a common ground between industries that are important for safety Their similarity lies in addition to the technological advancement of products and solutions in equally high safety requirements in particular taking into account the influence of human factor Thus it is of relevance to analyze an impact of human factor in the context of safety The matter is rather complex on the one hand humans manage technical systems on the other hand human errors negligence or evil intentions can turn the system into a threat with disastrous consequences However human interaction with any technical system begins earlier in the design stage In this stage designer being creator of the system must ensure a safe operation and take into consideration possible risks including those caused by human factors itself The book is interdisciplinary in nature and intended mainly for designers of technical systems aiming to assist the specialists in understanding the issues of human participation in life cycle of these systems The examples given are intended to benefit from experiences of not one but a number of industries *The Legality*

and Accountability of Autonomous Weapon Systems Afonso Seixas-Nunes,2022-05-19 By adopting a multi disciplinary approach this book provides a comprehensive analysis of the legality of the use of autonomous weapons systems under international law It examines different arguments presented by States roboticists and scholars to demonstrate the challenges such systems will create for the laws of war This study examines how technology of warfare seeks to increase the dissociation of risk and communication between weapons and their human operators Furthermore it explains how algorithms might give rise to errors on the battlefield that cannot be directly attributed to human operators Against this backdrop Dr Seixas Nunes examines three distinct legal frameworks the distinction between the legality of weapons and the laws of targeting different mechanisms of individual accountability and the importance of recovering the category of *dolus eventualis* for programmers and technicians and finally State responsibility for violations of the laws of war caused by weapons software errors
