Micro-Community-Based Participatory Research Health Science Projects, to Problem-solve and Build Leadership skills in Children at risk of ACES in extreme Urban Poverty Robert A. Branch MD FRCP, Michelle L. Steimer, LLC NCC
LPC, 2024-01-02

The Orenda approach We describe the foundational base and health and education process to interface science and health learning for vulnerable adolescents who live in extreme urban poverty in the US the forgotten children to manage emotional and social barriers at this critical stage of their lives These children live in neighborhoods concentrated with dysfunctional families many with Adverse Childhood Experiences ACEs They are at risk for complications of personal and environmental factors while still adolescents They lack the opportunity to build resilience and leadership to overcome these challenges We integrate experiential learning approaches between contemporary physician health and K 12 science learning pedagogy to emphasize the value of science to a community Our experiences are presented of challenges faced and barriers overcome over 4 years in over 100 adolescents in different extreme neighborhoods of poverty in the rust belt city of Pittsburgh

Mission 1 To experience the social skills in an ethical framework for critical thinking and leadership by conducting successful community research in forgotten children 2 To improve the local culture of health care to reduce health disparities in underserved neighborhoods

The Orenda Approach An Iroquois adjective denotes the goal of developing leadership in adolescents The approach is by organizing health sciences clubs for at risk adolescents as an after school activity with trained mentors Small teams select and identify locally relevant health disparities micro Community Based Participatory Research mCBPR projects Using the 5 steps of mCBPR scientific process with a mantra of learn decide and do at each step they conduct a wide range of practices to extend skills promoted by STEM disciplines by adding arts and science as STREAM learning The mCBPR projects are used to draw inferences and present recommendations to reduce barriers posed by the local community Fitted into an academic school year in weekly OST club meetings with an end of academic year the results are shared in a local community health fair

Long term objectives We offer a model for a city wide network of clubs targeted to the most underserved neighborhoods as an approach to improve city wide health equity If sustained This could contribute multiple topics for a cumulative increased awareness to enhance the local culture of health Without help these forgotten children are destined to the local cycle of failure a societal lost opportunity With help each year a cohort of students would be trained in problem solving as an increased societal opportunity as community leaders for the future

Exercises in Architecture Simon Unwin, 2022-08-01 This revised edition of *Exercises in Architecture Learning to Think as an Architect* is full of new content building on the success of the previous edition All the original exercises have been revised and new ones added with the format changing to allow the inclusion of more supplementary material The aim remains the same to help pre or early course architecture students begin and develop their ability to think as architects Learning to do architecture is tricky It involves awakening abilities that remain dormant in most people It is like learning language for the first time a task

made more mystifying by the fact that architecture deals not in words but in places places to stand to walk to sit to hide to sleep to cook to eat to work to play to worship This book was written for those who want to be architects It suggests a basis for early experiences in a school of architecture but it could also be used in secondary schools and colleges or as self directed preparation for students in the months before entering professional education Exercises in Architecture builds on and supplements the methodology for architectural analysis presented in the author s previous book Analysing Architecture the Universal Language of Place Making fifth edition 2021 and demonstrated in his Twenty Five Buildings Every Architect Should Understand Routledge 2015 Together the three books deal with the three aspects of learning any creative discipline 1 Analysing Architecture provides a methodology for analysis that develops an understanding of the way architecture works 2 Twenty Five Buildings explores and extends that methodology through analysis of examples as case studies and 3 Exercises in Architecture offers a way of expanding understanding and developing fluency by following a range of rudimentary and more sophisticated exercises Those who wish to become professional architects wherever in the world they might be must make a conscious effort to learn the universal language of architecture as place making to explore its powers and how they might be used The exercises in this book are designed to help
