

Transport in Plants

We get water from the roots to the leaves, up the xylem via the **TRANSPIRATION STREAM**

Sustainable Food
E.g. for Quorn (mycoprotein) and dropping over fishing

'producing food in a way that can continue for many years'

Efficient Food
Large surface area
Short diffusion pathway
Only one cell between food and air in lungs
Good blood supply
To take dissolved products of digestion + water
To take waste products to get it from the
muscles in the blood

Adaptations for exchange in the intestines (absorbing your food)
Large surface area
Short diffusion pathway
Only one cell between food and air in lungs
Good blood supply
To take dissolved products of digestion + water
To take waste products to get it from the muscles in the blood

Roots also have a large surface area (root hair cells) so they absorb most of the water and minerals a plant will need.

Waxy cuticle - water and gas proof
Stops too much water loss.

Intensive Farming: Stop energy loss by keeping movement from animal movement and keeping animals warm (keeping them inside)

Autonomous On!

Adaptations for gaseous exchange (in your lungs)
Large surface area
Short diffusion pathway
Only one cell between food and air in lungs
Steep concentration gradient.
Remember: a substance will move from where there's a lot to where there's a little.
This is helped with **good blood supply and breathing** so we can absorb more oxygen (O₂) in lungs (the oxygen then moves to the other side and releases CO₂)

Energy Drinks - for when your DEHYDRATED
Contain Water, sugar and mineral ions.
Water - to rehydrate
Sugar - for energy
Minerals - to replace those lost during sweating.

Contains **vitamin B** levels of a **vitamin B** - just as good!

Biology Unit 3

LUNGS

Active Transport
This is when something moves against the concentration gradient.
Low to High!

It needs energy to happen! But means ions can be absorbed from soil and sugars and salts can move into cells.

Osmosis
WATER diffusing from where it is a lot of it to where there is less of it.

Water moves up a plant stem from cell to cell by osmosis. Lots of water keeps the cell turgid.

Water moves in and out of cell depending on the concentration of the solution surrounding them.

High water concentration
Low water concentration

Through a partially permeable membrane.

Artificial breathing

Positive pressure - pushing the air in.

Benefits: Not invasive (you don't need a mask) can aid the paralysed for years and can be used during surgery. Can be used at home!

Negative pressure - a vacuum is created outside the body moving the chest up and causing air to be drawn in.

Benefits: Will keep you alive.

Drawbacks: Very restricting and out dated. Most stay in hospital, just made used anymore.

The Iron Lung

Breathing in (inhalation)
Diaphragm contracts flattens Intercostal muscles (muscles around the ribs) contract - moving ribs up and out
Volume of lungs increases - air moves in
Breathing in (exhalation)
Diaphragm relaxes coming up Intercostal muscles (muscles around the ribs) relax - moving ribs down and in
Volume of lungs decreases - air moves out

Remember: A more concentrated substance will naturally combine with water.
