SQL	SQLite
SQL is a Structured Query Language used to query a Relational Database System.	SQLite is an Embeddable Relational Database Management System which is written in ANSI-C.
Main components of SQL are Data Definition Language(DDL), Data Manipulation Language(DML), Embedded SQL and Dynamic SQL.	SQLite supports many features of SQL and has high performance and does not support stored procedure.
SQL is Structured Query Language which is used with databases like MySQL, Oracle, Microsoft SQL Server, IBM DB2, etc. It is not a database itself.	SQLite is a portable database resource. We have an extension of SQLite in any language, to access that database.
A conventional SQL database needs to be running as a service like OracleDB to connect to and provide a list of functionalities.	SQLite database system doesn't provide such functionalities.
SQL is a query language which is used by different SQL databases. It is not a database itself.	SQLite is a database management system itself which uses SQL.
