Expertise in Mathematics Instruction Yeping Li, Gabriele Kaiser, 2010-12-15 Accumulated research findings in past decades have led to the common knowledge that teachers professional knowledge is essential to effective classroom instruction However there is still very limited understanding about the nature of teachers expertise in mathematics instruction *Expertise in Mathematics Instruction* addresses this need clearly and concisely In particular it examines all aspects of emphases employed to characterize the nature of expertise in mathematics instruction from both researchers and practitioners perspectives Moreover with research contributions from both the East and the West this book also examines ideas pertinent to fostering and demonstrating expertise in mathematics instruction within different system contexts This book will raise questions and issues for mathematics education researchers to guide a critical examination of what can be learned from other education systems *Expertise in Mathematics Instruction* builds on its theoretical and methodological approach with contributions from international experts in the field Additionally a review of related research from mathematics education serves as an introduction to the new research in both Eastern and Western settings Concluding this resource is a reflection on the benefits of this international collaboration and possible research directions for the future The final chapter cohesively joins traditional and current research for action *Expertise in Mathematics Instruction* is of interest to researchers in mathematics education mathematics teacher educators and mathematics educators *The Differentiated Math Classroom* Miki Murray, 2007 In every mathematics classroom the need for differentiated instruction is present in many of its acute Students learn at different rates in different ways with different successes and different challenges Instruction

must be flexible enough to meet everyone's needs and nurturing enough to not only support growth but also address the frustration that often leads to mathphobia. The Differentiated Math Classroom can help make high quality differentiated instruction a classroom reality. It's the usable comprehensive resource teachers need to help students of all levels and abilities succeed with math. Whether you teach math sixty minutes a day or six periods a day, The Differentiated Math Classroom describes both the big ideas of differentiation and the day to day teaching that makes it work. Miki Murray and Jenny Jorgensen present everything you need to get started and to help all students meet national standards including ideas for Setting up a classroom to maximize opportunities for differentiation and establish community, Getting to know students strengths and needs through high quality assessments, Devising anchor activities that help students work independently with meaningful math content while you free up time for individual instruction, Creating tiered lessons that scaffold content and provide the flexibility to challenge some students and offer assistance to others. Murray and Jorgensen offer practical ideas for planning and designing units that engage students and facilitate learning about important math concepts as well as teaching tools, questions for professional reflection, and answers to teachers most frequently asked questions about differentiation. Discover that differentiated instruction is a flexible framework that supports all math learners. Filled with examples from real classes and samples of student work, The Differentiated Math Classroom will help every child learn more effectively by showing you how to think about students mathematics and your teaching in powerful new ways. Knowing and Learning Mathematics for Teaching National Research Council, Mathematical Sciences Education Board, Center for Education, Mathematics Teacher Preparation Content Workshop Program Steering Committee, 2001-01-25. There are many questions about the mathematical preparation teachers need. Recent recommendations from a variety of sources state that reforming teacher preparation in postsecondary institutions is central in providing quality mathematics education to all students. The Mathematics Teacher Preparation Content Workshop examined this problem by considering two central questions: What is the mathematical knowledge teachers need to know in order to teach well? How can teachers develop the mathematical knowledge they need to teach well? The Workshop activities focused on using actual acts of teaching such as examining student work, designing tasks, or posing questions as a medium for teacher learning. The Workshop proceedings, Knowing and Learning Mathematics for Teaching is a collection of the papers presented, the activities, and plenary sessions that took place. **Scott Foresman-Addison Wesley Middle School Math**, 2002. *Connecting Mathematical Ideas* Jo Boaler, Cathy Humphreys, 2005. In math like any subject, real learning takes place when students can connect what they already know to new ideas. In *Connecting Mathematical Ideas*, Jo Boaler and Cathy Humphreys offer a comprehensive way to improve your ability to help adolescents build connections between different mathematical ideas and representations and between domains like algebra and geometry. *Connecting Mathematical Ideas* contains two CDs worth of video case studies from Humphreys' own middle school classroom that show her encouraging students to bridge complex mathematical concepts.

with their prior knowledge Replete with math talk and coverage of topics like representation reasonableness and proof the CDs also include complete transcripts and study questions that stimulate professional learning Meanwhile the accompanying book guides you through the CDs with in depth commentary from Boaler and Humphreys that breaks down and analyzes the lesson footage from both a theoretical and a practical standpoint In addition to addressing the key content areas of middle school mathematics Boaler and Humphreys pose and help you address a broad range of frequently asked pedagogical questions such as How can I organize productive class discussions How do I ask questions that stimulate discussion and thought among my students What s the most effective way to encourage reticent class members to speak up What role should student errors play in my teaching Go inside real classrooms to solve your toughest teaching questions Use the case studies and the wealth of professional support within **Connecting Mathematical Ideas** and find new ways to help your students connect with math
