Organizing Committee ICCSCE 2025 *Prices, Production, and Inventories Over the Automotive Model Year* Adam Copeland,2005 This paper studies the within model year pricing and production of new automobiles Using new monthly data on U S transaction prices we document that for the typical new vehicle prices typically fall over the model year at a 9.2 percent annual rate Concurrently both sales and inventories are hump shaped To explain these time series we formulate a market equilibrium model for new automobiles in which inventory and pricing decisions are made simultaneously On the demand side we use micro level data to estimate time varying aggregate demand curves for each vehicle On the supply side we solve a dynamic programming model of an automaker that while able to produce only one vintage of a product at a time may accumulate inventories and consequently sell multiple vintages of the same product simultaneously The profit maximizing pricing and production strategies under a build to stock inventory policy imply declining prices and hump shaped sales and inventories of the magnitudes observed in the data Further roughly half of the price decline is driven by inventory control considerations as opposed to decreasing demand
