Designing Microwave Sensors for Glucose Concentration Detection in Aqueous and Biological Solutions Carlos G. Juan, 2021-06-14 This book presents a comprehensive study covering the design and application of microwave sensors for glucose concentration detection with a special focus on glucose concentration tracking in watery and biological solutions. This book is based on the idea that changes in the glucose concentration provoke variations in the dielectric permittivity of the medium. Sensors whose electrical response is sensitive to the dielectric permittivity of the surrounding media should be able to perform as glucose concentration trackers. At first, this book offers an in-depth study of the dielectric permittivity of water glucose solutions at concentrations relevant for diabetes purposes; in turn, it presents guidelines for designing suitable microwave resonators which are then tested in both water glucose solutions and multi-component human blood plasma solutions for their detection ability and sensitivities. Finally, a portable version is developed and tested on a large number of individuals in a real clinical scenario. All in all, the book reports on a comprehensive study on glucose monitoring devices based on microwave sensors. It covers in depth the theoretical background, provides extensive design guidelines to maximize sensitivity, and validates a portable device for applications in clinical settings.

Multigrid Finite Element Methods for Electromagnetic Field Modeling Yu Zhu, Andreas C. Cangellaris, 2006-02-03 This is the first comprehensive monograph that features state-of-the-art multigrid methods for enhancing the modeling versatility, numerical robustness, and computational efficiency of one of the most popular classes of numerical electromagnetic field modeling methods: the method of finite elements. The focus of the publication is the development of robust preconditioners for the iterative solution of electromagnetic field boundary value problems (BVPs) discretized by means of finite methods. Specifically, the authors set forth their own successful attempts to utilize concepts from multigrid and multilevel methods for the effective preconditioning of matrices resulting from the approximation of electromagnetic BVPs using finite methods. Following the authors' careful explanations and step-by-step instruction, readers can duplicate the authors' results and take advantage of today's state-of-the-art multigrid multilevel preconditioners for finite element-based iterative electromagnetic field solvers. Among the highlights of coverage are: Application of multigrid multilevel and hybrid multigrid multilevel preconditioners to electromagnetic scattering and radiation problems; Broadband robust numerical modeling of passive microwave components and circuits; Robust finite element-based modal analysis of electromagnetic waveguides and cavities; Application of Krylov subspace-based methodologies for reduced-order macromodeling of electromagnetic devices and systems; Finite element modeling of electromagnetic waves in periodic structures. The authors provide more than thirty detailed algorithms alongside pseudo-codes to assist readers with practical computer implementation. In addition, each chapter includes an applications section with helpful numerical examples that validate the authors' methodologies and demonstrate their computational efficiency and robustness. This groundbreaking book, with its coverage of an exciting new enabling computer-aided design technology, is an

Power Amplifiers for the S-, C-, X- and Ku-bands Mladen Božanić, Saurabh Sinha, 2015-12-29 This book provides a detailed review of power amplifiers including classes and topologies rarely covered in books and supplies sufficient information to allow the reader to design an entire amplifier system and not just the power amplification stage A central aim is to furnish readers with ideas on how to simplify the design process for a preferred power amplifier stage by introducing software based routines in a programming language of their choice The book is in two parts the first focusing on power amplifier theory and the second on EDA concepts Readers will gain enough knowledge of RF and microwave transmission theory principles of active and passive device design and manufacturing and power amplifier design concepts to allow them to quickly create their own programs which will help to accelerate the transceiver design process All circuit designers facing the challenge of designing an RF or microwave power amplifier for frequencies from 2 to 18 GHz will find this book to be a valuable asset

Microwave NDT N. Ida, 1992-11-30 Microwave testing has been paid only scant attention in the literature as a method for nondestructive testing of materials yet it offers some attractive features especially for the testing of composite and other non metallic

materials Microwave techniques have been used in a large number of applications that can be classified as nondestructive testing applications ranging from large scale remote sensing to detection of tumors in the body This volume describes a unified approach to microwave nondestructive testing by presenting the three essential components of testing theory practice and modelling While recognizing that each of these subjects is wide enough to justify a volume of its own the presentation of the three topics together shows that these are interrelated and should be practiced together While few will argue against a good theoretical background modelling and simulation of the testing environment is seldom part of the NDT training in any method but particularly so in microwave testing The text is divided in four parts The first part presents the field theory background necessary for understanding the microwave domain The second part treats microwave measurements as well as devices and sources and the third part discusses practical tests applicable to a variety of materials and geometries The fourth part discusses modelling of microwave testing Each chapter contains a bibliography intended to expand on the material given and in particular to point to subjects which could not be covered either as not appropriate or for lack of space For engineers applied physicists material scientists
