Design and Analysis of Distributed Algorithms Nicola Santoro, 2006-12-13 This text is based on a simple and fully reactive computational model that allows for intuitive comprehension and logical designs The principles and techniques presented can be applied to any distributed computing environment e g distributed systems communication networks data networks grid networks internet etc The text provides a wealth of unique material for learning how to design algorithms and protocols perform tasks efficiently in a distributed computing environment Distributed Algorithms Adrian Segall, Shmuel

Zaks, 1992-10-15 This volume presents the proceedings of the Sixth Workshop on Distributed Algorithms WDAG 92 held in Haifa Israel November 2 4 1992 WDAG provides a forum for researchers and other parties interested in distributed algorithms and their applications The aim is to present recent research results explore directions for future research and identify common fundamental techniques that serve as building blocks in many distributed algorithms Papers in

the volume describe original results in all areas of distributed algorithms and their applications including distributed graph algorithms distributed combinatorial algorithms design of network protocols routing and flow control communication complexity fault tolerant distributed algorithms distributed data structures distributed database techniques replica control protocols distributed optimization algorithms mechanisms for safety and security in distributed systems and protocols for real time distributed systems

**Distributed Algorithms** J. van Leeuwen, Jan van Leeuwen, 1988-05 This volume presents the proceedings of the 2nd International Workshop on Distributed Algorithms held July 8 10 1987 in Amsterdam The Netherlands It contains 29 papers on new developments in the area of the design and analysis of distributed algorithms The topics covered include e g algorithms for distributed consensus and agreement in networks connection management and topology update schemes election and termination detection protocols and other issues in distributed network control

Networks and Distributed Computation Michel Raynal, 1987 This book covers recent rapid developments in distributed systems It introduces the basic tools for the design and analysis of systems involving large scale concurrency with examples based on network systems considers problems of network systems considers problems of network and global state learning discusses protocols allowing synchronization constraints to be distributed and analyses the fundamental elements of distribution in detail using a large number of algorithms Interprocess communication and synchronization are central issues in the design of distributed systems taking on a different character from their counterparts in centralized systems

*Introduction to Distributed Algorithms* Gerard Tel, 2000-09-28 Distributed algorithms have been the subject of intense development over the last twenty years The second edition of this successful textbook provides an up to date introduction both to the topic and to the theory behind the algorithms The clear presentation makes the book suitable for advanced undergraduate or graduate courses whilst the coverage is sufficiently deep to make it useful for practising engineers and researchers The author concentrates on algorithms for the point to point message passing model and includes algorithms for the implementation of computer communication networks Other key areas discussed are algorithms for the control of distributed applications wave broadcast election termination detection randomized algorithms for anonymous networks snapshots deadlock detection synchronous systems and fault tolerance achievable by distributed algorithms The two new chapters on sense of direction and failure detectors are state of the art and will provide an entry to research in these still developing topics
