Recent Global Research and Education: Technological Challenges Ryszard Jabłoński, Roman Szewczyk, 2016-09-22 Developments in the connected fields of solid state physics bioengineering mechatronics and nanometrology have had a profound effect on the emergence of modern technologies and

their influence on our lives In all of these fields understanding and improving the basic underlying materials is of crucial importance for the development of systems and applications The International Conference Inter Academia 2016 has successfully married these fields and become a regular feature in the conference calendar It consisted of seven thematic areas in the field of material science nanotechnology biotechnology plasma physics metrology robotics sensors and devices The book Recent Global Research and Education Technological Challenges is intended for use in academic government and industry R D departments as an indispensable reference tool for the years to come Also we hope that the volume can serve the world community as the definitive reference source in Advances in Intelligent Systems and Computing This book comprises carefully selected 68 contributions presented at the 15th International Conference on Global Research and Education INTER ACADEMIA 2016 organized by Faculty of Mechatronics Warsaw University of Technology on September 26 28 in Warsaw Poland It is the second volume in series following the edition in 2015 It brings together the knowledge and experience of 150 leading researchers representing 13 countries We would like to thank all contributors and reviewers for helping us to put together this book

Leading-edge Electric Power Research Cian M. O'Sullivan, 2008 This book presents new and significant research on electric power The world is becoming increasingly electrified For the foreseeable future coal will continue to be the dominant fuel used for electric power production The low cost and abundance of coal is one of the primary reasons for this Electric power transmission a process in the delivery of electricity to consumers is the bulk transfer of electrical power Typically power transmission is between the power plant and a substation near a populated area Electricity distribution is the delivery from the substation to the consumers Due to the large amount of power involved transmission normally takes place at high voltage 110 kV or above Electricity is usually transmitted over long distance through overhead power transmission lines Underground power transmission is used only in densely populated areas due to its high cost of installation and maintenance and because the high reactive power gain produces large charging currents and difficulties in voltage management A power transmission system is sometimes referred to colloquially as a grid however for reasons of economy the network is rarely a true grid Redundant paths and lines are provided so that power can be routed from any power plant to any load centre through a variety of routes based on the economics of the transmission path and the cost of power Much analysis is done by transmission companies to determine the maximum reliable capacity of each line which due to system stability considerations may be less than the physical or thermal limit of the line Deregulation of electricity companies in many countries has led to renewed interest in reliable economic design of transmission networks
