Algorithm Design: A Methodological Approach - 150 problems and detailed solutions

Patrick Bosc, Marc Guyomard, Laurent Miclet, 2023-01-31

A bestseller in its French edition this book is original in its construction and its success in the French market demonstrates its appeal It is based on three principles

- 1 An organization of the chapters by families of algorithms exhaustive search divide and conquer etc On the contrary there is no chapter devoted only to a systematic exposure of say algorithms on strings Some of these will be found in different chapters
- 2 For each family of algorithms an introduction is given to the mathematical principles and the issues of a rigorous design with one or two pedagogical examples
- 3 For the most part the book details 150 problems spanning seven families of algorithms For each problem a precise and progressive statement is given More importantly a complete solution is detailed with respect to the design principles that have been presented often some classical errors are pointed out

Roughly speaking two thirds of the book is devoted to the detailed rational construction of the solutions

Introduction to the Design & Analysis of Algorithms

Anany Levitin, 2012

Based on a new classification of algorithm design techniques and a clear delineation of analysis methods

Introduction to the Design and Analysis of Algorithms presents the subject in a coherent and innovative manner Written in a student friendly style the book emphasizes the understanding of ideas over excessively formal treatment while thoroughly covering the material required in an introductory algorithms course

Popular puzzles - are used to motivate students interest and strengthen their skills in algorithmic problem solving

Other learning enhancement features include chapter summaries hints to the exercises and a detailed solution manual

A Guide to Algorithm Design

Anne Benoit, Yves Robert, Frédéric Vivien, 2013-08-27

Presenting a complementary perspective to standard books on algorithms

A Guide to Algorithm Design Paradigms Methods and Complexity Analysis provides a roadmap for readers to determine the difficulty of an algorithmic problem by finding an optimal solution or proving complexity results It gives a practical treatment of algorithmic complexity and guides readers in solving algorithmic problems

Divided into three parts the book offers a comprehensive set of problems with solutions as well as in depth case studies that demonstrate how to assess the complexity of a new problem

Part I helps readers understand the main design principles and design efficient algorithms

Part II covers polynomial reductions from NP complete problems and approaches that go beyond NP completeness

Part III supplies readers with tools and techniques to evaluate problem complexity including how to determine which instances are polynomial and which are NP hard

Drawing on the authors classroom tested material this text takes readers step by step through the concepts and methods for analyzing algorithmic complexity

Through many problems and detailed examples readers can investigate polynomial time algorithms and NP completeness and beyond

Problem solving is an essential part of every scientific discipline It has two components

- 1 problem

identification and formulation and 2 the solution to the formulated problem One can solve a problem on its own using ad hoc techniques or by following techniques that have produced efficient solutions to similar problems This required the understanding of various algorithm design techniques how and when to use them to formulate solutions and the context appropriate for each of them This book presents a design thinking approach to problem solving in computing by first using algorithmic analysis to study the specifications of the problem before mapping the problem on to data structures then on to the suitable algorithms Each technique or strategy is covered in its own chapter supported by numerous examples of problems and their algorithms The new edition includes a comprehensive chapter on parallel algorithms and many enhancements
