George,2008-02-11 Through contributions from leading authors *Issues in Heterodox Economics* provides a critical analysis of the methodology of mainstream economics Challenges economists to abandon sterile formalism and develop new intellectual rigors to contribute to pressing contemporary issues A series of cutting edge articles provides a critical analysis of the dependence of mainstream economics on mathematical modelling and other methodologies Topics discussed include sustainable development worker control of firms evolutionary growth theory and more Challenges economists to abandon sterile formalism and develop new intellectual rigors to contribute to pressing contemporary issues      *The Publishers' Trade List Annual* ,1985      **Computable Foundations for Economics** K. Vela Velupillai,2012-07-26 *Computable Foundations for Economics* is a unified collection of essays some of which are published here for the first time and all of which have been updated for this book on an approach to economic theory from the point of view of algorithmic mathematics By algorithmic mathematics the author means computability theory and constructive mathematics This is in contrast to orthodox mathematical economics and game theory which are formalised with the mathematics of real analysis underpinned by what is called the ZFC formalism i e set theory with the axiom of choice This reliance on ordinary real analysis and the ZFC system makes economic theory in its current mathematical mode completely non algorithmic which means it is numerically meaningless The book provides a systematic attempt to dissect and expose the non algorithmic content of orthodox mathematical economics and game theory and suggests a reformalization on the basis of a strictly rigorous algorithmic mathematics This removes the current schizophrenia in mathematical economics and game theory where theory is entirely divorced from algorithmic applicability for experimental and computational exercises The chapters demonstrate the uncomputability and non constructivity of core areas of general equilibrium theory game theory and recursive macroeconomics The book also provides a fresh look at the kind of behavioural economics that lies behind Herbert Simon s work and resurrects a role for the noble classical traditions of induction and verification viewed and formalised now algorithmically It will therefore be of particular interest to postgraduate students and researchers in algorithmic economics game theory and classical behavioural economics      **Books in Print Supplement** ,1984

**Taylor Series Integration of Differential-algebraic Equations** Eric Todd Phipps,2003 A multiple shooting technique

for computing periodic orbits in these systems is presented as well This technique allows the approximation of periodic orbits using coarse discretizations and converges to the orbit on a fixed discretization The technique is found to provide highly accurate approximations of periodic orbits The method is applied to a simple model of bipedal walking studied in CGMR01 Results consistent with those found in CGMR01 are obtained providing independent verification of the claim of the existence of a stable walking motion in this system
