Introduction to Global Optimization R. Horst, Panos M. Pardalos, Nguyen Van Thoai, 2000-12-31 Most of the existing books on optimization focus on the problem of computing locally optimal solutions Global optimization is concerned with the computation and characterization of global optima of nonlinear functions Global optimization problems are widespread in the mathematical modeling of real world systems for a very broad range of applications During the past three decades many new theoretical algorithmic and computational contributions have helped to solve globally multi extreme problems arising from important practical applications Introduction to Global Optimization is the first comprehensive textbook that covers the fundamentals in global optimization The second edition includes algorithms applications and complexity results for quadratic programming concave minimization DC and Lipschitz problems decomposition algorithms for nonconvex optimization and nonlinear network flow problems Each chapter contains illustrative examples and ends with carefully selected exercises which are designed to help the student to get a grasp of the material and enhance their knowledge of global optimization methods Audience This textbook is addressed not only to students of mathematical programming but to all scientists in various disciplines who need global optimization methods to model and solve problems [Constraint-Based Scheduling](#)

Philippe Baptiste, Claude Le Pape, Wim Nuijten, 2012-12-06 Constraint Programming is a problem solving paradigm that establishes a clear distinction between two pivotal aspects of a problem 1 a precise definition of the constraints that define the problem to be solved and 2 the algorithms and heuristics enabling the selection of decisions to solve the problem It is because of these capabilities that Constraint Programming is increasingly being employed as a problem solving tool to solve scheduling problems Hence the development of Constraint Based Scheduling as a field of study The aim of this book is to provide an overview of the most widely used Constraint Based Scheduling techniques Following the principles of Constraint Programming the book consists of three distinct parts The first chapter introduces the basic principles of Constraint Programming and provides a model of the constraints that are the most often encountered in scheduling problems Chapters 2 3 4 and 5 are focused on the propagation of resource constraints which usually are responsible for the hardness of the scheduling problem Chapters 6 7 and 8 are dedicated to the resolution of several scheduling problems These examples illustrate the use and the practical efficiency of the constraint propagation methods of the previous chapters They also show that besides constraint propagation the exploration of the search space must be carefully designed taking into account specific properties of the considered problem e.g dominance relations symmetries possible use of decomposition rules Chapter 9 mentions various extensions of the model and presents promising research directions **Python Automation Cookbook** Jaime Buelta, 2020-05-29 Get a firm grip on the core processes including browser automation web scraping Word Excel and GUI automation with Python 3.8 and higher Key Features Automate integral business processes such as report generation email marketing and lead generation Explore automated code testing and Python's growth in data science and AI

automation in three new chapters Understand techniques to extract information and generate appealing graphs and reports with Matplotlib Book Description In this updated and extended version of Python Automation Cookbook each chapter now comprises the newest recipes and is revised to align with Python 3.8 and higher The book includes three new chapters that focus on using Python for test automation machine learning projects and for working with messy data This edition will enable you to develop a sharp understanding of the fundamentals required to automate business processes through real world tasks such as developing your first web scraping application analyzing information to generate spreadsheet reports with graphs and communicating with automatically generated emails Once you grasp the basics you will acquire the practical knowledge to create stunning graphs and charts using Matplotlib generate rich graphics with relevant information automate marketing campaigns build machine learning projects and execute debugging techniques By the end of this book you will be proficient in identifying monotonous tasks and resolving process inefficiencies to produce superior and reliable systems What you will learn Learn data wrangling with Python and Pandas for your data science and AI projects Automate tasks such as text classification email filtering and web scraping with Python Use Matplotlib to generate a variety of stunning graphs charts and maps Automate a range of report generation tasks from sending SMS and email campaigns to creating templates adding images in Word and even encrypting PDFs Master web scraping and web crawling of popular file formats and directories with tools like BeautifulSoup Build cool projects such as a Telegram bot for your marketing campaign a reader from a news RSS feed and a machine learning model to classify emails to the correct department based on their content Create fire and forget automation tasks by writing cron jobs log files and regexes with Python scripting Who this book is for Python Automation Cookbook Second Edition is for developers data enthusiasts or anyone who wants to automate monotonous manual tasks related to business processes such as finance sales and HR among others Working knowledge of Python is all you need to get started with this book
