Occupational Science For Occupational Therapy:

Occupational Science for Occupational Therapy Doris Pierce, 2024-06-01 Occupational Science for Occupational Therapy articulates how occupational science research produces unique insights into occupation and increases the effectiveness of occupational therapy interventions. This text illustrates the four key types of knowledge now being researched in occupational science: descriptive, relational, predictive, and prescriptive. This text also offers a comprehensive review of occupational science's history of emergence from the needs and interests of occupational therapy, conflicting origins and intents, and ongoing development as a discipline within academia. In *Occupational Science for Occupational Therapy*, Dr. Doris Pierce and an outstanding group of occupational scientists explain how their discoveries build the science and support practice. A rich variety of methods and perspectives mark the work of these career scientists as they respond to the knowledge base needs of occupational therapy. This fully evidence-based text also brings the research experience alive for occupational therapy students, describing the passions, challenges, and choices that are the reality of research as an occupation. All research chapters discuss how findings build both science and practice, including learning supports in which students can try out research activities, explore assessment, or develop interventions. Most importantly, *Occupational Science for Occupational Therapy* provides new and experienced practitioners a thorough exploration of the latest research in occupation-based practice. *Occupational Science for Occupational Therapy* synthesizes key works by occupational scientists, including a foreword by Dr. Elizabeth Yerxa, founder of the science of occupational therapy. Occupational science students, practitioners, and faculty will especially appreciate this book's comprehensive coverage of work by current leaders of research on occupation-based practice.

Occupational Science Jerry A. Johnson, Elizabeth J. Yerxa, 1990. Representing one of the most visionary concepts about occupational therapy practice and education available today, *Occupational Science: The Foundation for New Models of Practice* introduces the notion of a basic science of occupation. Specifically, this provocative volume proposes that the profession of occupational therapy, in collaboration with other relevant scientific disciplines, develop a science of occupation that would provide a foundation for occupational therapy practice. The development of an occupational science is desirable since occupation and its meaning for and application to human life are unique to occupational therapy and embody the principles upon which the profession was founded. The forward-thinking authors discuss the relevance of this potential science, propose arguments for its acceptance and support by members of the profession, and provide illustrations that suggest its application in practice. Certain to provoke serious discussion among occupational therapists, this revolutionary book offers new potential and possibilities for the continuing growth of occupational therapy as a scientific discipline and as a profession. *Occupational Science* introduces the idea of a basic science of occupation which studies the human as an occupational being, demonstrates the application of occupational science to occupational therapy practice, provides innovative models of occupational therapy practice to improve the capacities of

people who have chronic disability and to prevent incapacity in those at risk
