Gerard Maral,Michel Bousquet,2011-08-24 Revisions to 5th Edition by Zhili Sun University of Surrey UK New and updated edition of this authoritative and comprehensive reference to the field of satellite communications engineering Building on the success of previous editions Satellite Communications Systems Fifth Edition covers the entire field of satellite communications engineering from orbital mechanics to satellite design and launch configuration and installation of earth stations including the implementation of communications links and the set up of the satellite network This book provides a comprehensive treatment of satellite communications systems engineering and discusses the technological applications It demonstrates how system components

interact and details the relationship between the system and its environment The authors discuss the systems aspects such as techniques enabling equipment and system dimensioning and state of the art technology for satellite platforms payloads and earth stations New features and updates for the fifth edition include More information on techniques allowing service provision of multimedia content Extra material on techniques for broadcasting including recent standards DVB RCS and DVB S2 Digital Video Broadcasting Return Channel Satellite and Satellite Version 2 Updates on onboard processing By offering a detailed and practical overview Satellite Communications Systems continues to be an authoritative text for advanced students engineers and designers throughout the field of satellite communications and engineering *Doppler Applications in LEO Satellite Communication Systems* Irfan Ali, Pierino G. Bonanni, Naofal Al-Dhahir, John E. Hershey, 2005-12-06 Doppler Applications in LEO Satellite Communication Systems develops and presents an important class of techniques useful in the construction of little Low Earth Orbit LEO satellite communication systems It centers on the very significant Doppler shift that attends communications through a LEO satellite and shows how this phenomenon can be exploited for an unexpected benefit The techniques taught in the book are expected to be particularly attractive to system engineers because ground based transceivers must generally compensate for the large Doppler component and therefore the necessary receiver processing loops are often already in place and expensed This volume starts with a recounting of the characteristics of a LEO satellite and its orbit The 2nd chapter addresses the LEO orbital geometry and reviews the Doppler effect attending LEO communications Chapter three is focused on the important task of estimating the Doppler at a ground terminal Appropriate signal processing algorithms are reviewed Chapter four is concerned with predicting LEO satellite visibility Chapters five and six are respectively devoted to the use of the significant LEO Doppler as an aid in a new traffic flow control protocol and as an aid for effecting communications power control The last chapter describes MATLAB based analysis Doppler Applications in LEO Satellite Communication Systems provides a thorough review of the LEO Doppler phenomenon An Introductory Guide to EC Competition Law and Practice Valentine Korah, 1994 New Technical Books New York Public Library, 1992
