

### PROBLEM 2.1

A nylon thread is subjected to a 8.5-N tension force. Knowing that  $E = 3.3$  GPa and that the length of the thread increases by 1.1%, determine (a) the diameter of the thread, (b) the stress in the thread.

### SOLUTION

(a) Strain:  $\epsilon = \frac{\delta}{L} = \frac{1.1}{100} = 0.011$

Stress:  $\sigma = E\epsilon = (3.3 \times 10^9)(0.011) = 36.3 \times 10^6$  Pa

$$\sigma = \frac{P}{A}$$

Area:  $A = \frac{P}{\sigma} = \frac{8.5}{36.3 \times 10^6} = 234.16 \times 10^{-9}$  m<sup>2</sup>

Diameter:  $d = \sqrt{\frac{4A}{\pi}} = \sqrt{\frac{(4)(234.16 \times 10^{-9})}{\pi}} = 546 \times 10^{-6}$  m

$d = 0.546$  mm ◀

(b) Stress:

$\sigma = 36.3$  MPa ◀

*Innovative Solutions in Structural and Geotechnical Engineering*, 1999 **Parallel Programming Using C++** Gregory V. Wilson, Paul Lu, 1996-07-08 Foreword by Bjarne Stroustrup Software is generally acknowledged to be the single greatest obstacle preventing mainstream adoption of massively parallel computing While sequential applications are routinely ported to platforms ranging from PCs to mainframes most parallel programs only ever run on one type of machine One reason for this is that most parallel programming systems have failed to insulate their users from the architectures of the machines on which they have run Those that have been platform independent have usually also had poor performance Many researchers

now believe that object oriented languages may offer a solution By hiding the architecture specific constructs required for high performance inside platform independent abstractions parallel object oriented programming systems may be able to combine the speed of massively parallel computing with the comfort of sequential programming Parallel Programming Using C describes fifteen parallel programming systems based on C the most popular object oriented language of today These systems cover the whole spectrum of parallel programming paradigms from data parallelism through dataflow and distributed shared memory to message passing control parallelism For the parallel programming community a common parallel application is discussed in each chapter as part of the description of the system itself By comparing the implementations of the polygon overlay problem in each system the reader can get a better sense of their expressiveness and functionality for a common problem For the systems community the chapters contain a discussion of the implementation of the various compilers and runtime systems In addition to discussing the performance of polygon overlay several of the contributors also discuss the performance of other more substantial applications For the research community the contributors discuss the motivations for and philosophy of their systems As well many of the chapters include critiques that complete the research arc by pointing out possible future research directions Finally for the object oriented community there are many examples of how encapsulation inheritance and polymorphism can be used to control the complexity of developing debugging and tuning parallel software
