Modeling, Simulation, Testing, and Measurements of Wireless Communication Systems Hüseyin Arslan,2013-02-01

The high demand for communications

anywhere and anytime has been the driving force for the development of wireless services and technologies. Wireless technologies and services have evolved significantly over the last couple of decades from simple paging to real time voice communication and recently to very high rate data communications. This dramatic change has an effect on society in many aspects enabling people to communicate in ways unimaginable in the past and contributing to the quality of life that is enjoyed today by many. In this book wireless communication systems and concepts are introduced from a practical and laboratory perspective with a goal to provide readers with the experience and knowledge to design test and simulate wireless systems along with wireless circuits using modern instrumentation and computer aided design software.

Optimization Methods in Mobile Communication Systems Milind Pande, Anand J. Kulkarni, Apoorva S. Shastri, 2025-10-22
This book presents the result of an innovative challenge to create a systematic literature overview driven by machine generated content. This machine generated volume with chapter introductions by the human expert of summaries of the existing studies furthers our understanding of the optimization methods in mobile communication systems. The book provides a machine generated comprehensive yet classified review of the optimization methods, techniques and approaches associated with different mobile communications and systems including wavelet based CR-OFDM systems, MIMO slot antenna with low mutual coupling for 5G networks etc. It also covers mainly the techniques for performance analysis of MIMO systems such as the hybrid filtering technique for MIMO OFDM systems and artificial intelligence solutions beyond 5G radio access networks. Questions and related keywords were prepared for the machine to query, discover, collate and structure by Artificial Intelligence (AI) clustering. The AI based approach seemed especially suitable to provide an innovative perspective as the topics are indeed both complex, interdisciplinary and multidisciplinary. Springer Nature has published much on these topics in its journals over the years so the challenge was for the machine to identify the most relevant content and present it in a structured way that the reader would find useful. The automatically generated literature summaries in this book are intended as a springboard to further discoverability. They are

particularly useful to readers with limited time looking to learn more about the subject quickly and especially if they are new to the topics Springer Nature seeks to support anyone who needs a fast and effective start in their content discovery journey from the undergraduate student exploring interdisciplinary content to Master or PhD thesis developing research questions to the practitioner seeking support materials this book can serve as an inspiration to name a few examples It is important to us as a publisher to make advances in technology easily accessible to our authors and find new ways of AI based author services that allow human machine interaction to generate readable usable collated research content
