Statistics David Freedman:

Statistics David Freedman, Robert Pisani, Roger Purves, 2007-02-20 The Fourth Edition has been carefully revised and updated to reflect current data

Statistical Models David A. Freedman, 2009-04-27 This lively and engaging book explains the things you have to know in order to read empirical papers in the social and health sciences as well as the techniques you need to build statistical models of your own The discussion in the book is organized around published studies as are many of the exercises Relevant journal articles are reprinted at the back of the book Freedman makes a thorough appraisal of the statistical methods in these papers and in a variety of other examples He illustrates the principles of modelling and the pitfalls The discussion shows you how to think about the critical issues including the connection or lack of it between the statistical models and the real phenomena The book is written for advanced undergraduates and beginning graduate students in statistics as well as students and professionals in the social and health sciences

Statistical Models David Freedman, 2005-08-08 This lively and engaging textbook provides the knowledge required to read empirical papers in the social and health sciences as well as the techniques needed to build statistical models The author explains the basic ideas of association and regression and describes the current models that link these ideas to causality He focuses on applications of linear models including generalized least squares and two stage least squares The bootstrap is developed as a technique for estimating bias and computing standard errors Careful attention is paid to the principles of statistical inference There is background material on study design bivariate regression and matrix algebra To develop technique there are computer labs with sample computer programs The book's discussion is organized around published studies as are the numerous exercises many of which have answers included Relevant papers reprinted at the back of the book are thoroughly appraised by the author

Statistical Models and Causal Inference David A. Freedman, 2009-11-23 David A Freedman presents here a definitive synthesis of his approach to causal inference in the social sciences He explores the foundations and limitations of statistical modeling illustrating basic arguments with examples from political science public policy law and epidemiology Freedman maintains that many new technical approaches to statistical modeling constitute not progress but regress Instead he advocates a shoe leather methodology which exploits natural variation to mitigate confounding and relies on intimate knowledge of the subject matter to develop meticulous research designs and eliminate rival explanations When Freedman first enunciated this position he was met with scepticism in part because it was hard to believe that a mathematical statistician of his stature would favor low tech approaches But the tide is turning Many social scientists now agree that statistical technique cannot substitute for good research design and subject matter knowledge This book offers an integrated presentation of Freedman's views

Bayesian Analysis for the Social Sciences Simon Jackman, 2009-10-27 Bayesian methods are increasingly being used in the social sciences as the problems encountered lend themselves so naturally to the subjective qualities of Bayesian methodology This book provides an accessible introduction to Bayesian methods tailored specifically for social science students It contains lots of real examples from political science psychology sociology and economics exercises in all chapters and detailed descriptions of all the key concepts without assuming any background in statistics beyond a first course It features examples of how to implement the methods using WinBUGS the most widely used Bayesian analysis software in the world and R an open source statistical software The book is supported by a Website featuring WinBUGS and R code and data sets
