*Parallel Computing: On the Road to Exascale* Gerhard R. Joubert, Hugh Leather, Mark Parsons, Frans Peters, 2016-04-15 As predicted by Gordon E Moore in 1965 the performance of computer processors increased at an exponential rate Nevertheless the increases in computing speeds of single processor machines were eventually curtailed by physical constraints This led to the development of parallel computing and whilst progress has been made in this field the complexities of parallel algorithm design the deficiencies of the available software development tools and the complexity of scheduling tasks over thousands and even millions of processing nodes represent a major challenge to the construction and use of more powerful parallel systems This book presents the proceedings of the biennial International Conference on Parallel Computing ParCo2015 held in Edinburgh Scotland in September 2015 Topics covered include computer architecture and performance programming models and methods as well as applications The book also includes two invited talks and a number of mini symposia Exascale computing holds enormous promise in terms of increasing scientific knowledge acquisition and thus contributing to the future well being and prosperity of mankind A number of innovative approaches to the development and use of future high performance and high throughput systems are to be found in this book which will be of interest to all those whose work involves the handling and processing of large amounts of data

**Transition of HPC Towards Exascale Computing** Erik H. D'Hollander, Jack J. Dongarra, Ian Foster, Lucio Grandinetti, 2013-10-15 The US Europe Japan and China are racing to develop the next generation of supercomputers exascale machines capable of 10 to the 18th power calculations a second by 2020 But the barriers are daunting the challenge is to change the paradigm of high performance computing The 2012 biennial high performance workshop held in Cetraro Italy in June 2012 focused on the challenges facing the computing research community to reach exascale performance in the next decade This book presents papers from this workshop arranged into four major topics energy scalability new architectural concepts and programming of heterogeneous computing systems Chapter 1 introduces the status of present supercomputers which are still about two orders of magnitude separated from the exascale mark Chapter 2 examines energy demands a major limiting factor of today's fastest supercomputers the quantum leap in performance required for exascale computing will require a shift in architectures and technology In Chapter 3 scalable computer paradigms for dense linear algebra on massive heterogeneous systems are presented and Chapter 4 discusses architectural concepts Finally Chapter 5 addresses the programming of heterogeneous systems This book will be of interest to all those wishing to understand how the development of modern supercomputers is set to advance in the next decade
