Practical Pharmaceutical Laboratory Automation Brian D. Bissett, 2003-05-23 Laboratory automation is an increasingly important part of the job description of many laboratory scientists. Although many laboratory scientists understand the methods and principles involved in automation, most lack the necessary engineering and programming skills needed to successfully automate or interface equipment in the lab. A step-by-step how-to reference and guide. **Practical Pharmaceutical Laboratory Automation** explores the processes needed to automate the majority of tasks required in research today. The author discusses topics ranging from automated mathematical analysis to robotic automation of chemical processes to combinations of these and other processes. He presents a detailed discussion of high-throughput screening and assay development and takes an in-depth look at Visual Basic as the primary programming language used in laboratories. The text has a dedicated web site <http://www.pharmalabauto.com> that contains all the sample code and examples contained within the text, as well as other information related to laboratory automation. Providing a starting point for tackling automation problems, **Practical Pharmaceutical Laboratory Automation** helps you develop a strategy for automation that gets consistent results.

Electrical and Electronic Devices, Circuits, and Materials Suman Lata Tripathi, Parvej Ahmad Alvi, Umashankar Subramaniam, 2021-03-24 The increasing demand for electronic devices for private and industrial purposes leads designers and researchers to explore new electronic devices and circuits that can perform several tasks efficiently with low IC area and low power consumption. In addition, the increasing demand for portable devices intensifies the call from industry to design sensor elements, an efficient storage cell, and large capacity memory elements. Several industry-related issues have also forced a redesign of basic electronic components for certain specific applications. The researchers, designers, and students working in the area of electronic devices, circuits, and materials sometimes need standard examples with certain specifications. This breakthrough work presents this knowledge of standard electronic device and circuit design analysis, including advanced technologies and materials. This outstanding new volume presents the basic concepts and fundamentals behind devices, circuits, and systems. It is a valuable reference for the veteran engineer and a learning tool for the student, the practicing engineer, or an engineer from another field crossing over into electrical engineering. It is a must-have for any library.

AC Losses in High-Temperature Superconductor Tapes and Cables for Power Applications Godfrin, Aurélien, 2022-05-10 This work focuses on two topics. The first is the investigation of producing filaments on copper-stabilized coated conductors with striations made after or before electroplating the tape. The second topic is the applicability of the striations for reducing the AC losses of cables in particular the CORC and RACC cables which are made with high temperature superconductor HTS striated tapes.
