Intelligence Marie-Aude Aufaure, Esteban Zimányi, 2013-01-17 To large organizations business intelligence (BI) promises the capability of collecting and analyzing internal and external data to generate knowledge and value thus providing decision support at the strategic, tactical and operational levels. BI is now impacted by the Big Data phenomena and the evolution of society and users. In particular BI applications must cope with additional heterogeneous, often Web based sources e.g. from social networks, blogs, competitors, suppliers or distributors, data governmental or NGO based analysis and papers or from research publications. In addition they must be able to provide their results also on mobile devices taking into account location based or time based environmental data. The lectures held at the Second European Business Intelligence Summer School eBISS which are presented here in an extended and refined format cover not only established BI and BPM technologies but extend into innovative aspects that are important in this new environment and for novel applications e.g. machine learning, logic networks, graph mining, business semantics, large scale data management and analysis and multicriteria and collaborative decision making. Combining papers by leading researchers in the field, this volume equips the reader with the state of the art background necessary for creating the future of BI. It also provides the reader with an
