Accelerating Modernization with Agile Integration Adeline SE Chun, Aiden Gallagher, Amar A Shah, Callum Jackson, Claudio Tagliabue, Iliya Dimitrov, James Blackburn, Joel Gomez, Kim Clark, Lee Gavin, Maria Menendez, Martin Evans, Mohammed Alreedi, Murali Sitaraman, Nick Glowacki, Shishir Narain, Timothy Quigly, Tony Curcio, Ulas Cubuk, Vasfi Gucer, IBM Redbooks, 2020-07-01 The organization pursuing digital transformation must embrace new ways to use and deploy integration technologies so they can move quickly in a manner appropriate to the goals of multicloud decentralization and microservices The integration layer must transform to allow organizations to move boldly in building new customer experiences rather than forcing models for architecture and development that pull away from maximizing the organization's productivity Many organizations have started embracing agile application techniques such as microservice architecture and are now seeing the benefits of that shift This approach complements and accelerates an enterprise's API strategy Businesses should also seek to use this approach to modernize their existing integration and messaging infrastructure to achieve more effective ways to manage and operate their integration services in their private or public cloud This IBM Redbooks publication explores the merits of what we refer to as agile integration a container based decentralized and microservice aligned approach for integration solutions that meets the demands of agility scalability and resilience required by digital transformation It also discusses how the IBM Cloud Pak for Integration marks a significant leap forward in integration technology by embracing both a cloud native approach and container technology to achieve the goals of agile integration The target audiences for this book are cloud integration architects IT specialists and application developers

API REST LoopBack (Node.JS) vs. Rust Maksym Pryschepa Pryschepa,2017 The reason that led me to carry out this project is to analyze the current use of the JavaScript programming language which was born 20 years ago to meet certain needs and in a programming environment which nowadays highly differs from the use that is do ne out of JavaScript In order to demonstrate that the use of JavaScript on the server can lead to performance losses and incorrect habits I will make a comparison between JavaScript and another more appropriate or specialized language such as Rust for t he server scope After performing a conceptual introduction of each language I will perform performance tests in different fields such as requests per second robustness calculation speed latency and flow To all this I have been able to prove that it is not good to stretch too much the possibilities of a programming language however practical this may be since JavaScript turns out to have a much lower performance than Rust This makes in some areas such as the web server where in order to solve performance issues hardware will be increased when you can simply solve it by making a correct use of the code in the right place
