**Third International Conference on Image Processing and Capsule Networks** Joy Long-Zong Chen, João Manuel R. S. Tavares, Fuqian Shi, 2022-07-28 This book provides a collection of the state of the art research attempts to tackle the challenges in image and signal processing from various novel and potential research perspectives The book investigates feature extraction techniques image enhancement methods reconstruction models object detection methods recommendation models deep and temporal

feature analysis intelligent decision support systems and autonomous image detection models In addition to this the book also looks into the potential opportunities to monitor and control the global pandemic situations Image processing technology has progressed significantly in recent years and it has been commercialized worldwide to provide superior performance with enhanced computer machine vision video processing and pattern recognition capabilities Meanwhile machine learning systems like CNN and CapsNet get popular to provide better model hierarchical relationships and attempts to more closely mimic biological neural organization As machine learning systems prosper image processing and machine learning techniques will be tightly intertwined and continuously promote each other in real world settings Adopting this trend however the image processing researchers are faced with few image reconstruction analysis and segmentation challenges On the application side the orientation of the image features and noise removal has become a huge burden
