aging associated diseases scientists have developed a keen interest in understanding the aging process as they attempt to define the role of dysfunctional stem cells in the aging process With an aging population worldwide understanding these age related stem cell changes at a basic biology level and at the level of their influences for regenerative medicine is of interest and importance There is increasing evidence that the aging process can have much adverse effects on stem cells In the modern era one of the emerging fields in treating human diseases is stem cell research as stem cells have the remarkable potential to treat a wide range of diseases Nevertheless understanding the molecular mechanism involved in aging and deterioration of stem cell function is crucial in developing effective new therapies for aging Serves as an ideal reference to guide investigators toward valuable answers to the problems of our aging population Addresses the effect of time and age on human stem cells Includes chapters from contributors exploring the biology of stem cell aging around the globe The Journal of Cell Biology ,2008 No 2 pt 2 of November issue each year from v 19 1963 47 1970 and v 55 1972 contain the Abstracts of papers presented at the Annual Meeting of the American Society for Cell Biology 3d 1963 10th 1970 and 12th 1972 **A Guide to Undergraduate Science Course and Laboratory Improvements** National Science Foundation (U.S.).
