Case Studies In Bayesian Statistics:

Case Studies in Bayesian Statistical Modelling and Analysis Clair L. Alston, Kerrie L. Mengersen, Anthony N. Pettitt, 2012-10-10 Provides an accessible foundation to Bayesian analysis using real world models This book aims to present an introduction to Bayesian modelling and computation by considering real case studies drawn from diverse fields spanning ecology health genetics and finance Each chapter comprises a description of the problem the corresponding model the computational method results and inferences as well as the issues that arise in the implementation of these approaches Case Studies in Bayesian Statistical Modelling and Analysis Illustrates how to do Bayesian analysis in a clear and concise manner using real world problems Each chapter focuses on a real world problem and describes the way in which the problem may be analysed using Bayesian methods Features approaches that can be used in a wide area of application such as health the environment genetics information science medicine biology industry and remote sensing Case Studies in Bayesian Statistical Modelling and Analysis is aimed at statisticians researchers and practitioners who have some expertise in statistical modelling and analysis and some understanding of the basics of Bayesian statistics but little experience in its application Graduate students of statistics and biostatistics will also find this book beneficial

Case Studies in Bayesian Statistics Constantine Gatsonis, James S. Hodges, Robert E. Kass, Nozer D. Singpurwalla, 1993-06-11 The past few years have witnessed dramatic advances in computational methods for Bayesian inference As a result Bayesian approaches to solving a wide variety of problems in data analysis and decision making have become feasible and there is currently a growth spurt in the application of Bayesian methods The purpose of this volume is to present several detailed

examples of applications of Bayesian thinking with an emphasis on the scientific or technological context of the problem being solved. The papers collected here were presented and discussed at a Workshop held at Carnegie Mellon University September 29 through October 1 1991. There are five major articles each with two discussion pieces and a reply. These articles were invited by us following a public solicitation of abstracts. The problems they address are diverse but all bear on policy decision making. Though not part of our original design for the Workshop that commonality of theme does emphasize the usefulness of Bayesian methods in this arena. Along with the invited papers were several additional commentaries of a general nature the first comment was invited and the remainder grew out of the discussion at the Workshop. In addition there are nine contributed papers selected from the thirty four presented at the Workshop on a variety of applications. This collection of case studies illustrates the ways in which Bayesian methods are being incorporated into statistical practice. The strengths and limitations of the approach become apparent through the examples.

The 4th Workshop on Case Studies in Bayesian Statistics was held at the Carnegie Mellon University campus on September 27-28 1997. As in the past the workshop featured both invited and contributed case studies. The former were presented and discussed in detail while the latter were presented in poster format. This volume contains the four invited case studies with the accompanying discussion as well as nine contributed papers selected by a refereeing process. While most of the case studies in the volume come from biomedical research the reader will also find studies in environmental science and marketing research.

INVITED PAPERS

In Modeling Customer Survey Data Linda A. Clark, William S. Cleveland, Lorraine Denby and Chuanhai Li use hierarchical modeling with time series components in for customer value analysis. CVA data from Lucent Technologies. The data were derived from surveys of customers of the company and its competitors designed to assess relative performance on a spectrum of issues including product and service quality and pricing. The model provides a full description of the CVA data with random location and scale effects for survey respondents and longitudinal company effects for each attribute. In addition to assessing the performance of specific companies the model allows the empirical exploration of the conceptual basis of consumer value analysis. The authors place special emphasis on graphical displays for this complex multivariate set of data and include a wealth of such plots in the paper.

Case Studies in Applied Bayesian Data Science Kerrie L. Mengersen, Pierre Pudlo, Christian P. Robert, 2020-05-28 Presenting a range of substantive applied problems within Bayesian Statistics along with their Bayesian solutions this book arises from a research program at CIRM in France in the second semester of 2018 which supported Kerrie Mengersen as a visiting Jean Morlet Chair and Pierre Pudlo as the local Research Professor The field of Bayesian statistics has exploded over the past thirty years and is now an established field of research in mathematical statistics and computer science a key component of data science and an underpinning methodology in many domains of science business and social science Moreover while remaining naturally entwined the three arms of Bayesian statistics namely modelling computation and inference have grown into independent research fields While the research arms of Bayesian statistics continue to grow in many directions they are harnessed when attention turns to solving substantive applied problems Each such problem set has its own challenges and hence draws from the suite of research a bespoke solution The book will be useful for both theoretical and applied statisticians as well as practitioners to inspect these solutions in the context of the problems in order to draw further understanding awareness and inspiration
