**Ceramic Processing and Sintering** Mohamed N.

Rahaman, 2003-07-31 As the field's premiere source this reference is extensively revised and expanded to collect hard to find applications, equations, derivations, and examples illustrating the latest developments in ceramic processing technology. This book is concerned primarily with the processing of polycrystalline ceramics and focuses on the widespread fabrication of ceramics by the firing of consolidated powder forms. A brief treatment of sol gel processing is also included. **Ceramic Processing and Sintering** Second Edition provides clear and intensive discussions on colloidal and sol gel processing, sintering of ceramics, and kinetic processes in materials. From powder synthesis and consolidation to sintering and densification behavior, this latest edition emphasizes the impact of each processing procedure on ceramic properties. The second edition also contains new and extended discussions on colloid stability, polymer growth and gelation, additives in ceramic forming, diffusion, and defect structure, normal and abnormal grain growth, microwave sintering, Rayleigh instability effects, and Ostwald ripening. Illustrating the interconnectedness between the various steps in the overall fabrication route, **Ceramic Processing and Sintering** Second Edition approaches the fundamental issues of each process and shows how they are applied to the practical fabrication of ceramics.

**Ceramic Processing** Mohamed N. Rahaman, 2017-06-27

Many of the properties critical to the engineering applications of ceramics are strongly dependent on their microstructure, which in turn is dependent on the processing methods used to produce the ceramic material. **Ceramic Processing** Second Edition provides a comprehensive treatment of the principles and practical methods used in producing ceramics with controlled microstructure. Covering the main steps in the production of ceramics from powders, the book also provides succinct coverage of other methods for fabricating ceramics, such as sol gel processing, reaction bonding, chemical vapor deposition, and polymer pyrolysis. While maintaining the objectives of the successful first edition, this new edition has been revised and updated to include recent developments and expanded to feature new chapters on additives used in ceramic processing, rheological properties of suspensions, slurries, and pastes, granulation, mixing, and packing of particles, and sintering theory and principles. Intended as a textbook for undergraduate and graduate courses in ceramic processing, the book also provides an indispensable resource for research and development engineers in industry who are involved in the production of ceramics or who would like to develop a background in the processing of ceramics.

*Emergent Process Methods for High-Technology Ceramics* Robert F. Davis, Hayne Palmour, Richard L. Porter, 2012-12-06

This volume constitutes the Proceedings of the November 8-10, 1982 Conference on EMERGENT PROCESS METHODS FOR HIGH TECHNOLOGY CERAMICS held at North Carolina State University in Raleigh. It was the nineteenth in a series of University Conferences on Ceramic Science initiated in 1964 by four institutions of which North Carolina State University is a charter member along with the University of California at Berkeley, Notre Dame University, and the New York State College of Ceramics at Alfred University. More recently, ceramic oriented faculty in departments at the Pennsylvania State University and Case Western Reserve University have joined the four initial institutions as permanent members of the consortium. These research oriented conferences, each uniquely concerned with a timely ceramic theme, have been well attended by audiences which typically were both international and interdisciplinary in character. Their published Proceedings have been well received and are frequently cited. This three day conference addressed the fundamental scientific background as well as the technological state of the art of several novel methods which are beginning to influence present and future directions for non traditional ceramic processing, thus affecting many of the advanced ceramic materials needed for a wide variety of research and industrial applications. The number, the importance, and the application of new ceramic processing techniques have expanded considerably during the last ten years.
