Harvey J. Greenberg, 2006-06-16 This volume reflects the theme of the INFORMS 2004 Meeting in Denver Back to OR Roots Emerging as a quantitative approach to problem solving in World War II our founders were physicists mathematicians and engineers who quickly found peace time uses It is fair to say that Operations Research OR was born in the same incubator as computer science and it has spawned many new disciplines such as systems engineering health care management and transportation science Although people from many disciplines routinely use OR methods many scientific researchers engineers and others do not understand basic OR tools and how they can help them Disciplines ranging from finance to bioengineering are the beneficiaries of what we do we take an interdisciplinary approach to problem solving Our strengths are modeling analysis and algorithm design We provide a quantitative foundation for a broad spectrum of problems from economics to medicine from environmental control to sports from e commerce to computational ometry We are both producers and consumers because the mainstream of OR is in the interfaces As part of this effort to recognize and extend OR roots in future probl solving we organized a set of tutorials designed for people who heard of the topic and want to decide whether to learn it The 90 minutes was spent addre ing the questions What is this about in a nutshell Why is it important Where can I learn more In total we had 14 tutorials and eight of them are published here Operations

Research/Management Science at Work Erhan Kozan, Azuma Ohuchi, 2002-03-31 There is synergy between the diverse methodologies of Operations Research and Management Science and the many problems it seeks to solve Operation Research Management Science at Work is an example of that synergy The principal aim of this book is to examine selected recent research in and applications of Operational Research Management Science The focus is on research that is of industry interest and covers a wide range of topics from major fields of OR MS in a systematic and coherent fashion Each application is chosen

to demonstrate the elegance of their implementations The book meets the needs of applied researchers who are interested in applications of OR MS algorithms Moreover real world problems together with their solutions and implementations are the applications that have been selected for the volume The Asia Pacific region has embraced business applications of decision support systems in recent years Many of these applications have the state of the art OR MS techniques in this region embedded in them Hence the increased use of OR MS techniques in this region provides opportunities for identifying methodological advances that are taking place as a result of the unique nature of the applications These also provide opportunities for exploring synergies and interfaces that exist between OR MS both in terms of applications and theoretical advances

Department of Operations Research. Systems Optimization Laboratory, 1990 We proposed a build up interior method for solving an  $m$  equation  $n$  variable linear program which has the same convergence properties as their well known analogues in dual affine and projective forms but requires less computational effort The algorithm has three forms an affine scaling form a projective scaling form and an exact form that used pivot steps In this paper we present the first of these It differs from Dikin's algorithm of dual affine form in that the ellipsoid chosen to generate the improving directions in dual space is constructed from only a subset of the dual constraints
