Context

When purchasing items, it is often not possible to take advantage of more than one retailer's offer on the same item. In this activity, you will compare the discounts offered by two different retailers. You will use retail prices, the difference between the reference price and the actual price to calculate the savings. In addition, you will calculate an effective percentage discount on the sale, which represents the percentage by which the price is lowered by the retailer. **Discount Percentage = (Retail Price - Reference Price) / Reference Price**

Reference Price is listed as \$1.00 unless otherwise indicated.

SALE is the price of the item during a sale or other discount.

Discount Percentage is calculated as $(\text{Reference Price} - \text{Sale Price}) / \text{Reference Price}$.

SALE PRICE is the price of the item during a sale or other discount.

Reference Price is the price of the item during a sale or other discount.
